Pentagon looks to improve classified information tracking in wake of leak

By COREY DICKSTEIN
Stars and Stripes

The Defense Department does not intend to scale back the number of its military and civilian employees with classified information access, but it plans to better track who is accessing what secrets, a Pentagon official said Wednesday.

A 45-day review of policies and procedures ordered in April by Defense Secretary Lloyd Austin found most department officials with clearance are trustworthy, but policies meant to protect national secrets were interpreted differently across the vast, worldwide military organization.

Austin ordered the review in the wake of hundreds of classified documents being leaked to a private group of social media users. Airman 1st Class Jack Teixeira, a 21-year-old with the Massachusetts Air National Guard, is accused of leaking the military documents in a chatroom on Discord.

"The department relies on a culture of trust and accountability for those who are granted access to"

Russia launches cruise missile attack on Ukraine city of Lviv

By Mstyslav Chernov
Associated Press

LVIV, Ukraine — Russia fired cruise missiles Thursday at a western Ukraine city far from the front line of the war, killing at least five people in an apartment building in what officials said was the heaviest attack on civilian areas of Lviv since the Kremlin's forces invaded the country last year.

Emergency crews with search dogs went through the rubble of the building after the

nighttime attack destroyed the roof and the top two floors. At least 36 people were injured, according to authorities.

The youngest of the five people who died was 21 years old and the oldest was 95, according to Maksym Kozytzkyi, the governor of Lviv province, said.

"This woman survived the Second World War but, unfortunately, she didn't survive" Russia's full-scale invasion of Ukraine, Kozytzkyi said.

Debris and wrecked parked cars lined the street outside the building, which overlooks a small neighborhood park with swings and other playground equipment.

The last victim was pulled from the wreckage hours after the attack, and seven survivors were rescued, the Ukrainian Ministry of Internal Affairs said. About 180 people received psychological support following the attack.

Lviv Mayor Andriy Sadovyi said around

60 apartments and 50 cars in the area of strike were damaged. He announced two days of official mourning.

U.S. Ambassador to Ukraine Bridget Brink described the attack as "vicious."

"Russia's repeated attacks on civilians are absolutely horrifying," she tweeted.

Ukraine's air force reported it intercepted seven of the 10 Kalibr cruise missiles that

BUSINESS/WEATHER

Strong demand drives new car sales in US up

Associated Press

Demand for new SUVs, trucks and cars in the U.S. picked up steam in the second quarter, but the stronger sales kept prices high for consumers.

Auto sales rose a healthy 16.8% from April through June to just over 4.1 million, fueled by pent-up demand from nearly two years of short supplies due to factories that were hobbled by the global computer chip shortage.

For much of the year, average prices pulled back a bit and auto-

makers raised discounts a little. But in June, those trends began to stall out, said Ivan Drury, director of insights for Edmunds.com.

Consumers paid an average of \$45,978 per vehicle in June, according to J.D. Power estimates. That's flat from June of last year, but almost \$1,400 less than in December of 2022 when prices peaked.

Inventory on dealer lots was expected to be just over 1.2 million vehicles in June, about the same as most of this year, J.D. Power

said. Because of increased demand, supplies aren't growing.

Electric vehicle sales continued to rise during the first half of the year to more than 557,000 vehicles, or 7.2% of all new vehicle sales. In all of last year, consumers bought just over 807,000 EVs, or 5.8% of new vehicle sales.

General Motors led all automakers in second-quarter sales with almost 690,000, a 19% increase over a year ago. Toyota, which had been in second place, posted sales of 569,000, up 7%.

U.S. Air Force

In this image from video, a Russian SU-35 flies near a U.S. Air Force MQ-9 Reaper drone on Wednesday over Syria.

US releases video of Russian jets harassing Reaper drones in Syria

By **LOLITA C. BALDOR**
Associated Press

WASHINGTON — Russian fighter jets flew dangerously close to several U.S. drone aircraft over Syria on Wednesday, setting off flares and forcing the MQ-9 Reapers to take evasive maneuvers, the Air Force said. U.S. Air Forces Central released a video of the encounter, showing a Russian SU-35 fighter closing in on a Reaper, and later showed a number of the so-called parachute flares moving into the drone's flight path. The flares are attached to parachutes.

Lt. Gen. Alex Grynkeiwich, commander of 9th Air Force in the Middle East, said three of the U.S. drones were operating over Syria after 10:30 a.m. local time, on a mission against the Islamic State

group which was not detailed, when three of the Russian aircraft "began harassing the drones."

In a statement, Grynkeiwich said one of the Russian pilots moved their aircraft in front of a drone and engaged the SU-35's afterburner, which greatly increases its speed and air pressure. The jet blast from the afterburner can potentially damage the Reaper's electronics, and Grynkeiwich said it reduced the drone operator's ability to safely operate the aircraft.

"Russian military aircraft engaged in unsafe and unprofessional behavior while interacting with U.S. aircraft in Syria," he said, adding that the actions threaten the safety of the U.S. and Russian forces. "We urge Russian forces in

Syria to cease this reckless behavior and adhere to the standards of behavior expected of a professional air force so we can resume our focus on the enduring defeat of ISIS."

Army Gen. Erik Kurilla, head of U.S. Central Command, said in a statement that Russia's violation of ongoing efforts to clear the airspace over Syria "increases the risk of escalation or miscalculation."

About 900 U.S. forces are deployed to Syria to work with the Kurdish-led Syrian Democratic Forces battling the Islamic State militants there. No other details about the drone operation were provided, and it's not clear where over Syria the incidents took place.

AFRICOM: Claims of US casualties in Somalia false

By **JOHN VANDIVER**
Stars and Stripes

No U.S. troops were injured in an attack Thursday on a convoy in Somalia, where American forces have been supporting the central government's battle against Islamic militants, according to U.S. Africa Command.

Al-Shabab, which has been waging a decadeslong battle for control, claimed on the messaging app Telegram that it had inflicted casualties on U.S. troops on the outskirts of the southern coastal city of Kismayo.

The claims of casualties "are not accurate," AFRICOM spokesperson Kelly Cahalan said Thursday in a statement.

The convoy hit a roadside bomb Thursday morning near Kismayo, Cahalan said, adding that there also were no casualties among the Somali forces.

Al-Shabab has a long history of baseless claims that it killed or injured U.S. troops. Still, the terrorist organization has occasionally struck U.S. forces and targets in Somalia and nearby areas.

The highest-profile attack happened Jan. 5, 2020, when al-Shabab fighters overran an airfield in Kenya used by U.S. forces for operations in Somalia.

The attack killed one U.S. soldier and two American contractors.

Just three months earlier, al-

Shabab also launched an assault on U.S. troops based at Baledogle Military Airfield in Somalia.

That attack, described by military officials as the largest on American troops in Somalia in 30 years, involved a truck bomb. The explosion blasted a 20-foot-deep crater along the perimeter of a U.S. military outpost.

The ensuing battle resulted in the deaths of about a dozen al-Shabab fighters, as U.S. soldiers repelled the onslaught without any fatalities.

The U.S. military mission in Somalia revolves around training and advising local forces fighting against al-Shabab. Several hundred U.S. troops operate in the country.

The U.S. also carries out periodic airstrikes against terrorist targets there.

Within the Defense Department and beyond, there is a running debate about the threat al-Shabab poses to the West and the merits of having the U.S. military involved in Somalia.

In May 2022, the U.S. announced the return of special operations troops to Somalia, reversing a decision by President Donald Trump during the last days of his administration to pull 700 service members out of the country.

Marine Corps stealth fighters travel to Australia for first time

By **SETH ROBSON**
Stars and Stripes

Four Marine Corps F-35C Lightning IIs flew from California to Australia last month, the first time the stealth jets made the 7,800-mile journey across the Pacific Ocean, according to the service.

The aircraft from Marine Fighter Attack Squadron 314 departed Marine Corps Air Station Miramar, Calif., June 17, and arrived five days later at Royal Australian Air Force Base Williamtown in New South Wales, Australia, a June 24 release said.

The aircraft, designed specifically for carrier operations, are in Australia ahead of the biennial Talisman Sabre drills, scheduled to draw about 30,000 personnel, mostly from the United States and Australia, from July 22 to Aug. 4.

The Marine F-35Cs are Down

GADIEL ZARAGOZA/U.S. Marine Corps

F-35C Lightning II stealth fighters on their way to Australia prepare for aerial refueling over the Pacific Ocean, on June 17.

Under for the first time, but Marine F-35Bs, capable of short takeoffs and vertical landings, from Marine Corps Air Station Iwakuni, Japan, trained in Australia last summer.

The F-35Cs made four stopovers on their flight south and were supported with cargo and personnel flying in a KC-130J Super Hercules from Marine Aerial Refuel-

er Transport Squadron 352, the Marines' release said.

KC-135 Stratotankers from the 171st Air Refueling Wing, Pennsylvania Air National Guard, and 108th Air Refueling Wing, New Jersey Air National Guard, refueled the F-35s during the journey, according to the release.

"The VMFA-314 Black Knights are beyond excited to bring the first land-based [1st Marine Expeditionary Force] fifth-generation stealth fighters all the way from California to Australia," squadron commander Lt. Col. Michael O'Brien said in the release. "Over the past year, we've trained in our own Marine Corps F-35Cs with the Royal Australian Air Force F-35As and E-7 Wedgetails in the U.S., and now it is time to train with our valued Allies on their side of the globe."

The F-35s will work with Aus-

tralian forces at Williamtown through mid-July, the release said.

Australia is in the latter stages of procuring its F-35A fleet and may buy more, retired Air Force Lt. Gen. Dan Leaf, a former deputy commander of U.S. Pacific Command, said by email Thursday. Australia's first F-35A squadron became operational in 2021 and the country's entire fleet of stealth jets is due to be operational this year, according to the RAAF's website.

"But the investment by both countries in maximizing the combat capability — and thus, if potential adversaries are paying attention, deterrent power — is more important than numbers," Leaf said. "This is yet another example of like-minded nations, namely the U.S., its Allies and partners, drawn closer in security coopera-

tion by concerns about China's words and deeds and the tragic exemplar of Russia's invasion of Ukraine."

Deployments such as the F-35C mission to Australia aren't simple, Grant Newsham, a senior researcher with the Japan Forum for Strategic Studies in Tokyo, said in an email the same day.

"But one notes that Marine fighters have been making Trans-Pacific deployments for decades," he said.

The F-35C trans-Pacific flight isn't a game-changer but it demonstrates America's broader military power, Newsham said.

"Indeed, at least for a few years to come the U.S. still has a power projection advantage over the [Chinese military] and everyone else," he said. "China knows this of course and is working to close the gap."

PACIFIC

USS Washington flight deck OK'd ahead of return

BY ALEX WILSON
Stars and Stripes

The USS George Washington has completed its flight deck certification, one of the last steps before the aircraft carrier returns to normal operations after a lengthy refit period in Virginia.

The ship and its air wing over three days in late June launched and recovered aircraft 247 times during day and night sorties as part of the qualification, according to a carrier news release on June 30. It also carried out hangar bay drills, nighttime flight deck training and simulated emergency exercises before returning to Naval Station Norfolk.

"Flight deck certification was our first opportunity for the air wing and the ship team to work together in support of the ship's fundamental mission, launching and recovering aircraft at sea," said Capt. Brad Converse, commander of Carrier Air Wing 1, in the news release.

The certification is required be-

fore the George Washington can embark its air wing for at-sea operations. It comes just a month after the carrier completed an extended, six-year maintenance period at Huntington Ingalls' Newport News Shipbuilding in Virginia.

The George Washington arrived in Virginia in August 2017 for scheduled maintenance, including its midlife nuclear refueling and overhaul. The maintenance period was scheduled to last just four years, but complications from the COVID-19 pandemic and other setbacks delayed it significantly.

The shipyard, which built the carrier in the 1980s, officially "re-delivered" the vessel into Navy hands on May 25 following three days of sea trials.

The George Washington also met several other "momentous" milestones last week, including a fuel certification and its first underway replenishment in six years, its commander, Capt. Brent

TYLER CROWLEY/U.S. Navy

An F/A-18E Super Hornet taxis on the flight deck of the USS George Washington in the Atlantic Ocean on June 23.

Gaut, said in the news release.

"As always, I am incredibly proud of our USS George Washington Warfighters, and the incredible support from the Carrier Air Wing One team," he said.

The ship is slated for more training and operation in coming months, preliminary preparations for the George Washington's upcoming homeport shift to Japan sometime next year.

The Navy on April 28 announced that the George Washington will return to Yokosuka Naval Base to replace the USS Ronald Reagan as the centerpiece of the U.S. 7th Fleet's carrier strike group. The George Washington

served as the 7th Fleet's lead ship from 2008 to 2015 and was relieved by the Ronald Reagan.

Once the George Washington arrives in Yokosuka, the Ronald Reagan will relocate to Puget Sound Naval Shipyard in Bremerton, Wash., ending its eight-year tenure in Japan, just short of the 10-year limit for Navy ships deployed overseas.

Congress set the limit in the fiscal year 2019 Defense Department budget following the back-to-back collisions in 2017 of the destroyers USS Fitzgerald and USS John S. McCain. Both had been based at Yokosuka more than a decade when they collided with commer-

cial vessels in separate incidents.

More than 240 Navy families moved to Yokosuka in the months ahead of the George Washington's arrival in 2008. When the Ronald Reagan replaced the George Washington, they swapped nearly two-thirds of their respective crews.

The base will have a better understanding of how many sailors and their families will be moving this time around as the transition period draws closer, base spokesman Randall Baucom told Stars and Stripes by phone Thursday.

Airmen overheat during Okinawa change-of-command event

BY FRANK ANDREWS
Stars and Stripes

KADENA AIR BASE, Okinawa — The Okinawa summer heat took its toll on about 20 airmen who staggered or were pulled out of formation during the 18th Wing's change-of-command ceremony here Thursday morning.

Col. Nicholas Evans, an F-16 and F-35 pilot, took charge of the largest U.S. air wing and fighter base in the Western Pacific from Brig. Gen. David Eaglin, who goes next to the U.S. Indo-Pacific Command headquarters in Hawaii.

During his two-year tenure as wing commander, Eaglin grappled with the COVID-19 pandemic, which struck Okinawa's population particularly hard, the phase-out of aging F-15C/D Eagle fighters in favor of rotating squadrons of more advanced aircraft and the escalation of Chinese military activity in the seas west of the island.

Lt. Gen. Ricky Rupp, commander of U.S. Forces Japan and 5th Air Force, delivered the keynote address. The first airman overcome by the heat during the 40-minute, morning ceremony inside a hangar collapsed during Rupp's address.

"Only a few weeks ago, we saw

reporting of a dangerous [Chinese] intercept from U.S. aircraft in international air space," Rupp said, recalling a May 26 incident in which a Chinese fighter flew across the nose of an Air Force RC-135 surveillance plane.

Evans

"This is the reality our brave aircrew live every day," he said. Two minutes into Rupp's remarks, a female airman wobbled from the back of the formation, then collapsed as two other airmen lowered her to the hangar floor.

Over the next half-hour, more sweaty, pale airmen wobbled or were pulled from the formation by several Air Force personnel on the lookout for swaying airmen. Several stricken service members were escorted to a nearby air-conditioned bus to recover.

The morning temperature reached 90 degrees Fahrenheit and 64% humidity around 8:50 a.m., for a "feels like" temperature of 95, according to an Apple iPhone weather app.

Eaglin, an F-15 pilot, thanked the airmen of the 18th Wing before

FRANK ANDREWS/Stars and Stripes

An overheated airman loses her footing, Thursday, during the 18th Wing change-of-command ceremony at Kadena Air Base, Okinawa.

handing Evans control of the largest U.S. air power hub in the Pacific. About 7,000 airmen are stationed at Kadena, which has a total population of about 23,000 and squadrons of fighters, air refuelers, airborne command-and-control aircraft and helicopters, according to the base's website.

"Kadena holds an unrivaled key significance in the Pacific," Eaglin said. "The air base is a key location

for U.S. allies and partners serving as a power projection platform, ready to receive and deliver forces," he said.

Evans, previously the executive assistant to the commander of Pacific Air Forces at Joint Base Pearl Harbor-Hickam, Hawaii, is new to Okinawa but has served 15 years in the Pacific over his 24-year career.

"Having worked in Pacific Air

Force the past few years, I know how much we rely on this base," Evans told airmen during the ceremony. "Your actions were pivotal through many critical events."

Evans' experience includes stints with fighter squadrons at Kunsan and Osan air bases in South Korea, and at Camp Smith and Joint Base Pearl Harbor-Hickam, both in Hawaii, according to his official Air Force biography. He is also a command pilot with more than 2,000 hours in the F-16 and F-35.

Nominated to brigadier general in January by Defense Secretary Lloyd Austin, Evans' promotion is on the list of approximately 250 military promotions held up in the Senate by Sen. Tommy Tuberville. The Alabama Republican objects to a Pentagon policy that pays transportation costs for troops traveling for abortions.

"At any overseas base, the most important relation is with local civic leaders," Evans said. "Airmen, when you see us, please stop us and say hello and what is going on with your life and work and any way we can help improve your quality of life."

Gaspard takes command of 173rd Airborne in Italy

By JOHN VANDIVER
Stars and Stripes

Command of the U.S. Army's 173rd Airborne Brigade changed hands Thursday during a ceremony at its headquarters in Vicenza, Italy.

Col. Joshua Gaspard, who two decades ago served with the 173rd as leader of a platoon that was part of the initial push into Iraq in 2003, replaced Col. Michael Kloepper.

Gaspard arrives in Vicenza after a recent stint as a national security fellow at the Hoover Institution think tank in California. Before that, he served as a division operations officer with the 25th Infantry and also deployed to Afghanistan and Iraq.

Gaspard is one of the Army's fast-rising officers, having received a "brevet promotion" to colonel in February 2021. The speedy promotion system is focused on identifying leaders serving in a position above their current rank and pegs them for promotion outside the normal cycle.

In a March talk at the Hoover Institution, Gaspard recounted some career highlights. A 2002 graduate of West Point, he recalled watching the events of Sept.

FACEBOOK/173rd Airborne Brigade

Col. Joshua Gaspard takes the colors of the 173rd Airborne Brigade from Maj. Gen. Todd Wasmund on Thursday in Vicenza, Italy.

11, 2001, as a cadet.

"The terror attacks occurred just nine months before graduation, so it really changed the trajectory of my career in the Army, which was about to get started," he said.

His first wartime deployment came in March 2003, when he was part of an airborne assault in northern Iraq as a platoon leader. After that 12-month mission, he deployed to Afghanistan, again.

Leak: DOD desires standardization

FROM PAGE 1

classified national security information, Austin wrote in a June 30 memorandum announcing the review's findings. "This review found that the overwhelming majority of [Defense Department] personnel with access to [classified national security information] are trustworthy, and that all DOD components demonstrate a broad commitment to security."

But the review also found security measures were lax in some organizations for access to specialized facilities where classified information is handled and electronic databases where sensitive data is stored, said a senior defense official. The official spoke on condition of anonymity to brief reporters on the review's findings.

A number of changes that Austin ordered in response to the review are designed to make standard the use of existing technological tools to monitor access to Sensitive Compartmented Information Facilities, or SCIFs, and track electronic devices entering and exiting those facilities. The review also recommended all parts of the Defense Department implement systems that track what classified information cleared individ-

uals are accessing via computer systems and install high-level security officials with specialties in classified information.

Those changes should help raise red flags to commanders and managers who see their personnel accessing information that they have no need to see.

"The recommendation is focused on ensuring that we have the right need to know processes and procedures ... to ensure that the information that is available on classified networks is accessed only by those with a need to know," the senior defense official said. "So, some of that is focused on how do we validate what documents are accessed online? What types of things do you have to have in your digital [credentials] to access certain products?"

Prosecutors in the case against Teixeira allege he used his high-level clearance and his access to a trove of secrets via his work in information technology to steal documents, including some about the Russian war in Ukraine, and post photos of them on the Discord social media platform. Court documents allege he was caught wrongly accessing classified information and admonished for his

actions, but prosecutors charged he continued to access information without a need to know after that incident.

Teixeira, who has remained jailed since his April arrest, has pleaded not guilty to the charges.

The senior defense official said Wednesday that the 45-day review was only loosely related to Teixeira's actions, and that other ongoing Air Force and Justice Department probes could lead to other recommendations about classified information protection.

The official said the Pentagon was not looking to slow the growing number of workers — service members and civilians — with security clearances.

Doing so, the official argued, risked inhibiting the kind of information that is gathered or shared across the department and with allies.

"The department is mindful of the need to balance information security with requirement to get the right information to the right people at the right time to enhance our national security," a Pentagon fact sheet on the review reads.

Past PFAS spills at US air base reported

By **SETH ROBSON**
AND **HANA KUSUMOTO**
Stars and Stripes

YOKOTA AIR BASE, Japan — Firefighting suppressant with toxic PFAS was spilled three times at the home of U.S. Forces Japan in western Tokyo between 2010 and 2012 but local authorities were informed only recently, the Tokyo Metropolitan Government said Wednesday.

The Kanto Defense Bureau — an arm of Japan's Ministry of Defense — alerted Tokyo officials about the spills on Tuesday, ac-

ording to a statement on the metro government's website. It does not say when the Air Force informed the bureau about the incidents.

PFAS — per- and polyfluoroalkyl substances — are commonly found in household products such as electronics, paint or water-repellent clothing, as well as fire extinguishing foam widely used at locations such as airports, factories and military bases, according to the Environmental Protection Agency.

PFAS chemicals “break down

very slowly and can build up in people, animals and the environment over time,” according to the EPA. Current research shows high levels of exposure can lead to fertility issues, developmental effects, increased risks of cancers and other health concerns.

The Yokota spills occurred in January 2010 at a hangar and in October and November 2012 from a metal barrel and storage container, according to the metro government's statement.

U.S. officials told the defense bureau that they don't think chem-

icals escaped the base, the statement said.

The metro government “expressed regret” that it wasn't told of the spills soon after they happened and officials asked for more information from the Defense Ministry, according to the statement.

A spokesman for the base did not immediately respond to emailed questions about the leaks Thursday.

The fire suppression systems at Yokota that held PFAS are no longer in service as part of wider

effort to replace those systems with materials other than PFAS at U.S. air bases across Japan.

“All our PFAS systems have already been locked out so they can't be used,” Col. Andrew Roddan, commander of the base and its 374th Airlift Wing, told reporters on June 26.

Yokota will begin to replace that equipment during the next fiscal year, he said.

Austin swears in new recruits as services struggle to meet goals

By **MATTHEW ADAMS**
Stars and Stripes

FORT MEADE, Md. — Defense Secretary Lloyd Austin on Wednesday told the crowd outside the Baltimore Military Entrance Processing Station to relax as he prepared to administer the oath of enlistment to 85 recruits under a blazing summer sun.

“Please, relax everyone,” he told the group. “Just relax. It's a little warm out here.”

Recruits had been waiting outside close to 30 minutes during a humid Maryland day, practicing where they would stand during Austin's speech and when they would raise their hand to join the military.

The recruits were sworn in across the service branches, with 67 joining the active-duty force and 18 signing up for the reserves, according to a Fort Meade official. In the active-duty recruits, 49 are in the Army, 13 in the Marine Corps and five in the Navy. Later Wednesday, the recruits were sent to their assigned bases for basic training.

The swearing-in of recruits comes as the military struggles to

attract enough new troops into the service.

The Army fell short of its most recent recruiting goal of 60,000 by more than 25%, signing up fewer than 45,000 new soldiers in 2022. This year, the Army's goal is 65,000 new soldiers.

The Air Force's active-duty target for 2023 is almost 27,000 new recruits — a number that leaders in the service have already said they won't reach. Air Force Secretary Frank Kendall during a panel discussion on June 22 said the Air Force would miss its active duty recruiting mark by about 10%.

The Navy barely met its active-duty enlistment goal last year, surpassing its target of 33,400 by 42 people. Its goal is to sign up almost 38,000 new sailors before the fiscal year ends Sept. 30, but service officials expect to miss that target.

Austin on Wednesday told the recruits during the oath ceremony that he entered the Army two years after the draft ended and served for 41 years until his retirement in 2016. He said he knows first-hand that recruits are considering whether to spend one term in the

military or make it a career. In either case, he applauded their commitment.

“America's all-volunteer force is the strongest military in human history. And the power of today's military is a testament to every American patriot who freely volunteers to keep our republic safe,” he said.

Eighty-five recruits were sworn in by Austin on Wednesday.

Blue Star Families' annual survey on military life wrapping up soon

By **JUAN KING**
Stars and Stripes

Military families still have several days to take part in the largest annual survey of military life, which concludes Wednesday.

Blue Star Families, a national nonprofit organization, surveys military communities, including National Guard members and reservists, about issues affecting them, from financial hardship to child care.

Results of the Military Family Lifestyle Survey are routinely read by military leaders and politicians

in positions to make changes, Blue Star's senior director of applied research, Jessica Strong, told Stars and Stripes in an email June 17.

“This survey is an opportunity for the nation's military and Veteran families to voice the experiences within their communities and daily lives,” she said. “By collecting and analyzing results, we gain essential insights into the solutions that can address their concerns.”

Last year, approximately 48% of respondents cited spouse employment as the main issue affecting military families, Strong said.

About 26% of enlisted families faced food insecurity, according to the survey, while only 4% of officer family respondents were experiencing that issue.

“This year, in the current context of significant recruitment challenges, we're exploring the impact of these continued lifestyle challenges on families' well-being, willingness to remain in military service and to recommend military service to young family members, who are very often the future of our all-volunteer force,” Strong said.

Blue Star Families, established by military spouses in 2009, has poured approximately \$160 million worth of benefits into veterans and military families since that time, according to the organization. This year's study, the 14th by the nonprofit, began on May 24 and ends Monday.

The survey, according to Blue Star, is the largest and most comprehensive active-duty focused survey by an organization outside the military; more than 9,000 veterans take part worldwide and it reaches more than 1.5 million fam-

ily members yearly.

Blue Star partners with Syracuse University's D'Aniello Institute for Veterans and Military Families to get the survey out.

“We collect your voices and amplify them into collective action, shared with key decision-makers in government, in the military and in communities,” Strong said.

Those interested in the survey can access it at www.bluestarfam.org/survey2023.

Guantanamo detainees describe scars from torture, future hopes

By EDITH M. LEDERER
Associated Press

UNITED NATIONS — At the U.S. detention center at Guantanamo Bay, the aging men known by their serial numbers arrived at the meeting shackled. Every single one told the visitor — for many the first independent person they had talked to in 20 years — “You came too late.”

But they still talked, about the scant contacts with their families, their many health problems, the psychological and physical scars of the torture and abuse they experienced, and their hopes of leaving and reuniting with loved ones.

For the first time since the facility in Cuba opened in 2002, a U.S. president had allowed a United Nations independent investigator, Fionnuala Ní Aoláin, to visit.

She said in an interview with The Associated Press that it's true she came too late, because a total of 780 Muslim men were detained there following the 9/11 terrorist attacks that killed nearly 3,000 people, and today there are just 30 remaining.

The United Nations had tried for many years to send an independent investigator, but was turned down by the administrations of George W. Bush, Barack Obama and Donald Trump.

Ní Aoláin praised President Joe Biden's administration for allow-

ing “critical voices” into the facility. And she expressed hope other governments that have barred U.N. special investigators will follow Biden's example.

The Belfast-born law professor said she believes the cross-section of “high-value” and “non-high value” detainees she met with — the Biden administration gave her free rein to talk to anyone — “recognized the importance of sitting in a room with me.”

“But I think there was a shared understanding that at this point, with only 30 of them left, while I can make recommendations and they will hopefully substantially change the day-to-day experience of these men, the vast majority of their lives was lived in a context where people like myself and the U.N. had no influence,” she said.

Ní Aoláin, concurrently a law professor at the University of Minnesota and at Queens University in Belfast, said she has visited many high-security prisons during her six years as a U.N. human rights investigator, including some built for those convicted of terrorism and related serious offenses.

But “there is really no population on Earth like this population that came to Guantanamo Bay, Cuba, in the circumstances in which they came, rendered across borders,” she said.

In her report issued June 26, Ní Aoláin said even though the attacks on Sept. 11, 2001, were “crimes against humanity,” the treatment of the detainees at Guantanamo was unjustified. The vast majority were brought there without cause and had no relationship to the terrorist attacks, she wrote, adding that all of the men still alive suffer from psychological and physical trauma.

The Biden administration, which has said it wants to close the Guantanamo facility, said in a statement attached to the report that Ní Aoláin's findings “are solely her own” and “the United States disagrees in significant respects with many factual and legal assertions” but it will carefully review her recommendations.

In last week's interview with the AP, Ní Aoláin talked about what she saw on a personal level.

She said all U.S. personnel are required to address detainees by their internment serial number, not their name, which she called “dehumanizing.”

Ní Aoláin said she is especially concerned about three detainees who have not been charged and “live in a complete legal limbo,” which is “completely inconsistent with international law.” Of the others, 16 have been cleared to leave but haven't found a country willing to take them and 11 still have cases pending before U.S. military commissions.

Ní Aoláin said force feeding has been an ongoing practice in response to their hunger strikes,

ALEX BRANDON/AP

Flags fly in front of the tents of Camp Justice in Guantanamo Bay Naval Base, Cuba, in 2019.

which along with suicidal ideas and self-harm “speak to the core finding of this report — which is the deep and profound despair of individuals who've been held without trial for 20 years, have not seen their family members, have had no access to the outside world” except their lawyers until she visited in February for four days.

Practices like using restraints cause added psychological distress for many of the detainees, she said.

For the report, Ní Aoláin also interviewed victims, survivors and families of those killed on 9/11, and she met with some of the 741 men who already had been released from Guantanamo, including approximately 150 resettled in 29 countries. The rest returned home, and 30 men have since died.

What the men still at Guantanamo and those who have been released need most, she said, “is torture rehabilitation — every single one — and the U.S. is a leader in torture rehabilitation.”

She welcomed Biden's “extraordinary statement” on June 26, the International Day in Support of Victims of Torture, reaffirming U.S. opposition “to all forms of inhumane treatment and our commitment to eliminating torture and assisting torture survivors as they heal and in their quests for justice.”

“That tells me ... there is a capacity to remedy here,” she said. Rehabilitation is critical for all torture victims, she said, but also “for ourselves, because that's what democracies do. ... We look at our past, we take it onboard, and we address it, because democracies are self-correcting.”

Ní Aoláin called the communal meals and communal prayer for all detainees — which the U.S. emphasizes — very important.

“The men themselves are enormously important to each other in their rehabilitation,” she said. “There is an enormous bond of support and fraternity and care amongst these men for each other.”

NCO charged with murder in death of 2-year-old girl

By ROSE L. THAYER
Stars and Stripes

A Fort Leonard Wood, Mo., operations sergeant was indicted on a murder charge last week in the death of a 2-year-old girl who was in the care of the soldier's wife in their home, according to the Department of Justice.

Army Staff Sgt. Kevin Anthony Long, 40, was accused of physically assaulting the toddler in 2019 and causing blunt force injuries “as part of a pattern and practice of assault,” according to

Long

court documents unsealed last week. He is charged with murder in the first degree and making a false statement during the investigation.

A federal grand jury returned the indictment June 27, which was kept sealed until Long's arrest Friday.

Long, the operations sergeant for Bravo Company of the 58th Trans-

portation Battalion, remains in federal custody pending a detention hearing Thursday, according to the U.S. Attorney's Office in the Western District of Missouri. He was being held at Greene County jail in Springfield, according to online jail records.

The court documents do not name the child, but stated the crimes occurred Nov. 6, 2019, in Long's home at Fort Leonard Wood where his wife ran a day care. Long's wife did not have the required authorization to keep children in their home, said Dawn Arden, spokeswoman for Fort Leonard Wood. Long lied about knowing these requirements when asked about it by law enforcement officials on Nov. 22, 2019, which led to the second charge, according to the court documents.

Long has spent nearly 20 years in the Army with deployments to Iraq and Afghanistan, according to his service record. His home of record is listed as River Rouge, Mich.

EUROPE

Attack: City is over 300 miles from front lines

FROM PAGE 1

Russia fired from the Black Sea toward the Lviv region and its namesake city — more than 500 miles away — around 1 a.m. Thursday.

The Kremlin's forces have repeatedly hit civilian areas during the war, though Russian officials say they choose only targets of military value.

Lviv is near the western border with Poland and is more than 300 miles from the front lines of the war in eastern and southern Ukraine, where Kyiv's counteroffensive to dislodge Russian forces is in its early stages.

Sadovyi, the mayor, addressed residents in a video message, saying the attack was the largest on Lviv's civilian infrastructure since the beginning of last year's invasion.

"Russians are hitting us. That's how they love us. I'm sorry for those people who were killed. They were young. So sorry for them," said Ganna Fedorenko, a local resident, holding her hands crossed on her chest. She received injuries on her face, and an adhesive plaster turned red with blood

LIBKOS/AP

A Ukrainian serviceman of the 10th Assault Brigade Edelweiss fires a D-30 cannon toward Russian positions at the front line, near Bakhmut, Donetsk region, Ukraine, on Wednesday.

on her right cheek. "This is terrible. They hit civilians."

The Ministry of Internal Affairs said 64 people had to leave their

homes.

Ukrainian President Volodymyr Zelenskyy promised "a response to the enemy. A tangible

one."

He went later Thursday on an official trip to Bulgaria at the invitation of its new pro-Western gov-

ernment, with talks about weapon supplies and Ukraine's NATO membership on the agenda.

Ukrainian air force updates about the missiles' course during the night showed they flew to the Kyiv region first, then turned west toward Lviv.

Russia often changes the route of their missiles and drones to find weak spots in Ukraine's air defenses.

In the early days of the war, Lviv served as a main transit point for millions of refugees from different parts of the country that crossed the border to Europe. Hundreds of thousands of Ukrainians from the east and south remained in the calmer and safer Lviv.

Like the rest of the country, Lviv suffered power outages when Russia fired hundreds of missiles over the winter, aiming to destroy Ukraine's energy system. However, the attacks in the city were not as frequent as in the capital Kyiv, and Thursday's strike was a deep shock for many in the city.

Ukrainians shared messages of support on social media for Lviv residents.

Belarus: Wagner chief in Russia; Kremlin's strategy under scrutiny

By ANNA FRANTS
Associated Press

MINSK, Belarus — The mercenary leader who led a short-lived mutiny against the Kremlin is in Russia and his troops are in their field camps, the president of Belarus said Thursday, raising new questions about the deal that ended the extraordinary challenge to President Vladimir Putin's rule.

Belarusian President Alexander Lukashenko's claim could not be independently verified, and the Kremlin refused to comment on Yevgeny Prigozhin's whereabouts. But Russian media have reported he was recently seen at his offices in St. Petersburg.

It was not clear if Prigozhin's presence in Russia would violate the deal, which allowed the head of the Wagner Group military contractor to move to Belarus in exchange for ending the rebellion and a promise of amnesty for him and his troops. But the reports signaled that the agreement may have allowed him to finalize his affairs in Russia.

If that's true, it could suggest the threat posed by Prigozhin has not yet been fully defused and that the Kremlin is treading carefully with him until it can figure out what to do with troops who may still be loyal to him. Putin has said that Wagner troops can join the Russian military, retire

from service or move to Belarus.

But much about the agreement, which was brokered by Lukashenko, remains murky.

Last week, Lukashenko said the mercenary leader was in Belarus, but on Thursday he told international reporters that Prigozhin was in St. Petersburg and could also travel to Moscow if he so wishes, while Wagner's troops were in their camps. He did not specify the location of the camps, but Prigozhin's mercenaries fought alongside Russian forces in eastern Ukraine before their revolt and also have bases on Russian territory.

He also said that Prigozhin has been given back the cash and weapons that were confiscated by Russian authorities.

Asked where Prigozhin is, Putin's spokesman Dmitry Peskov shrugged off the question, saying that the Kremlin has neither the desire nor the means to track his movements — but reaffirmed that the deal that ended the mutiny envisaged his move to Belarus.

Lukashenko said his government offered Wagner, which has sent troops around the world to fight for Russia's interests, the use of Belarusian military camps but that the company had not made a final decision.

The Kremlin has played down

the fact that Prigozhin escaped punishment for his mutiny while other Putin's critics have been met with harsh prison sentences, exile or even death, saying that the deal with the Wagner chief was necessary to avoid massive bloodshed.

The Belarusian leader shrugged off suggestions that Putin might order Prigozhin killed, saying: "If you think that Putin is so vicious and vindictive to finish him off, no, it's not going to happen."

On Wednesday, Russian online newspapers Fontanka and Izvestia posted videos and photos of Prigozhin's opulent mansion in Russia's second-largest city that showed stacks of cash, gold bullion and a jacket fully covered in medals Prigozhin was awarded, including the Hero of Russia medal, one of the country's highest awards. It also published a collection of selfies that showed him posing in various wigs, fake beards and foreign uniforms, an apparent reflection of Wagner's deployments to Syria and several African countries.

A photo hanging in the mansion showed a lineup of decapitated heads. In one published image, an oversized souvenir sledgehammer could also be seen with the inscription "for important negotiations." The sledgehammer

PRIGOZHIN PRESS SERVICE/AP

Head of Wagner Group Yevgeny Prigozhin stands in front of multiple bodies lying on the ground in an unknown location.

has become a symbol of Wagner after reports its troops used the tool to beat defectors to death.

Asked if Prigozhin and his mercenaries would eventually move to Belarus, Lukashenko answered evasively that it would depend on the decisions of the Wagner chief and the Russian government. The Belarusian leader said he doesn't think the mercenaries' presence in his country would lead to its destabilization and said any Wagner troops there would be required to sign a contract with Belarusian authorities that would outline conditions and limitations of their actions.

He dismissed suggestions that the mercenaries could attack Ukraine from Belarusian territory, which Russian troops used as a

staging ground ahead of their invasion of Ukraine in February 2022. Moscow has also maintained a military presence in Belarus.

The abortive rebellion represented the biggest threat to Putin in his more than two decades in power, exposing his weakness and eroding the Kremlin's authority.

Lukashenko said he warned Prigozhin that he and his troops would be destroyed if they failed to make a quick deal to end their mutiny and that Belarus would send a brigade to help protect Moscow.

"It was necessary to nip it in the bud. It was very dangerous, as history shows," Lukashenko said.

NATION

LOS ANGELES COUNTY SHERIFF'S OFFICE/AP

Los Angeles County sheriff's deputies arrest a couple in a grocery store parking lot in Lancaster, Calif. The sheriff's office has opened an investigation into two deputies' actions after a bystander's cellphone footage showed one of them tackling a woman while she filmed her husband being handcuffed.

LA County sheriff opens investigation into deputy tackling female arrestee

Associated Press

LOS ANGELES — The Los Angeles County sheriff says a bystander's cellphone footage showing a deputy violently tackling a woman while she filmed a man being handcuffed, then pepper-spraying her in the face, is "disturbing," and community groups on Wednesday called for the department's new chief to hold his agency accountable.

The June 24 incident in Lancaster follows cases that have drawn scrutiny to the department amid allegations of excessive use of force by deputies. It's also testing the reform efforts of the new sheriff, Robert Luna, a former Long Beach police chief who has vowed to overhaul the nation's largest sheriff's department since taking it over in December after defeating incumbent Alex Villanueva.

Both officers were pulled off field duty, Luna said during an afternoon news conference, and could face discipline ranging from letters of reprimand all the way up to dismissal if misconduct is found. He didn't identify the deputy

ties.

Luna said he didn't learn about the encounter until six days after it occurred. The department released footage from the deputies' body-worn cameras on Monday.

Luna said he had seen the body-camera video as well as bystander video that spread on social media.

"It's disturbing. There's no ifs and buts about it," the sheriff said.

The Associated Press' efforts to reach the bystander Wednesday were not immediately successful.

The sheriff said his department has opened an investigation into the deputies' use of force and had notified the county's Civilian Oversight Commission and also federal monitors, who are overseeing reforms that the department agreed to in 2015.

The couple, whose names were not released, reportedly matched the descriptions of robbers targeting a grocery store in Lancaster, 45 miles northeast of Los Angeles, the sheriff's department said. The body-cam video shows the man sitting on a large rock outside the store and holding a cake before

deputies handcuff him as the woman stands a few feet away filming the encounter.

One deputy is seen tackling the woman to the ground. "Get on the ground!" he can be heard shouting as he pins her down with his knee on her neck and shoulder. "Stop or you'll get punched in the face!"

The woman is heard yelling "I can't breathe!" as the deputy is seen pepper-spraying her in the face. She screams, "I didn't do nothin'!" and the man repeatedly tells the other deputy that she has cancer.

At his news conference, Luna said the deputies were responding to a robbery in progress after receiving a 911 call from a store employee saying that two customers were assaulting "loss prevention employees."

The man was arrested and cited for resisting for delaying an officer, petty theft or attempted petty theft and interfering with a business, while the woman was cited for assaulting an officer and battery after assaulting loss prevention personnel, Luna said.

More seek jobless benefits, but labor market is resilient

BY MATT OTT
Associated Press

The number of Americans applying for jobless benefits rose last week, but remains at healthy levels despite the Federal Reserve's attempt to cool the labor market by raising interest rates.

U.S. applications for jobless claims rose by 12,000 to 248,000 for the week ending July 1, from 236,000 the previous week, the Labor Department reported Thursday.

The four-week moving average of claims, which evens out some of the week-to-week volatility, fell by 3,500 to 253,250.

Jobless claim applications are seen as a proxy for the number of layoffs in a given week.

For three weeks in late May and early June, jobless claims had appeared to reach a sustained, higher level, above 260,000. Even so, that increase may not have been enough for Fed officials to pivot from raising its main rate at its next meeting.

The U.S. economy has added jobs at a furious pace since more than 20 million jobs vanished when the COVID-19 pandemic hit in the spring of 2020. Americans have enjoyed unusual job security as companies have been reluctant to shed staff in a worker-friendly labor environment.

U.S. employers added a better-than-expected 339,000 jobs in May, surprising economists and painting a mostly encouraging picture of the labor market, even though the unemployment rate rose to a still-healthy 3.7%. Fed officials have said that the unemployment rate needs to rise well past 4% to bring inflation down.

The June jobs report, with a far more expansive set of labor data for the Fed to consider, is due out Friday. Analysts surveyed by FactSet expect the economy to have added about 205,000 jobs.

However, the payroll processor ADP on Thursday said its survey showed employers added 497,000 jobs in June, nearly twice as many as analysts were expecting. That sent markets lower before the bell on the perception that the odds of new rate hikes just went up when the Fed meets later this month.

For the most part, the U.S. economy has been resilient in the face of the Federal Reserve's aggressive rate-hiking campaign in its effort to extinguish persistent inflation not seen since the early 1980s. The rate hikes have slowly helped to suppress inflation, though perhaps not as quickly as the Fed had hoped.

Last week, the government said the U.S. economy grew at a 2% annual pace from January through March, much higher than the previous estimate of 1.3%. That, combined with a resilient labor market, will likely push Fed officials to go through with another rate hike or two before the end of the year as they continue to try to bring down stubborn inflation.

In June, Fed officials chose not to increase the central bank's benchmark borrowing rate for the first time in 15 months, though some said they expect to add another half-point to rates by the end of the year.

There have been a number high-profile layoffs recently, mostly in the technology sector, with many companies acknowledging they hired too many people during the pandemic.

The manufacturing sector has been contracting and the real estate sector has suffered because of higher interest rates. Three bank failures also have been blamed in part on higher interest rates.

Overall, 1.72 million people were collecting unemployment benefits the week that ended June 24, 13,000 fewer than the previous week.

Trump valet pleads not guilty in classified documents case

Associated Press

MIAMI — Donald Trump's valet, Walt Nauta, pleaded not guilty Thursday to charges that he helped the former president hide classified documents from federal authorities.

Nauta was charged alongside Trump in June in a 38-count indictment alleging the mishandling of classified documents. His arraignment was to have happened twice before, but he had struggled to retain a lawyer licensed in Flor-

ida and one appearance was postponed because of his travel troubles.

Ahead of his arraignment, Nauta hired Sasha Dadan, a criminal defense attorney and former public defender whose main law office is in Fort Pierce, where the judge who would be handling the trial is

Nauta

based. She appeared in court with Nauta, alongside his Washington lawyer, Stanley Woodward, who entered the not guilty plea on his behalf.

Nauta answered, "Yes, Your Honor," when he was asked whether he had reviewed the indictment during the brief court appearance.

He and his lawyers exited the courthouse after the arraignment and entered a Black Mercedes-Benz sedan without answering

questions from reporters.

Trump pleaded not guilty during his June 13 arraignment to charges including willful retention of national defense information. But Nauta's arraignment was postponed that day because of the lawyer situation and then was pushed back again last week when a flight from New Jersey he was to have taken was canceled.

The indictment filed by special counsel Jack Smith and his team of prosecutors accuses Nauta of

conspiring with Trump to conceal records that the former president had taken with him from the White House after his term ended in January 2021.

Prosecutors allege that Nauta, at the former president's direction, moved boxes of documents bearing classification markings so they would not be found by a Trump lawyer who was tasked with searching the home for classified records to be returned to the government.

NATION

US: Nearly half of faucets contain harmful chemicals

BY JOHN FLESHER
Associated Press

TRAVERSE CITY, Mich. — Drinking water from nearly half of U.S. faucets likely contains “forever chemicals” that may cause cancer and other health problems, according to a government study released Wednesday.

The synthetic compounds known collectively as PFAS are contaminating drinking water to varying extents in large cities and small towns — and in private wells and public systems, the U.S. Geological Survey said.

Researchers described the study as the first nationwide effort to test for PFAS in tap water from private sources in addition to regulated ones. It builds on previous scientific findings that the chemicals are widespread, showing up in consumer products as diverse as nonstick pans, food packaging and water-resistant clothing and making their way into water supplies.

Because the USGS is a scientific research agency, the report makes no policy recommendations. But the information “can be used to evaluate risk of exposure and inform decisions about whether or not you want to treat your drinking water, get it tested or get more information from your state” about the situation locally, said lead author Kelly Smalling, a research hydrologist.

The U.S. Environmental Protection Agency in March proposed the first federal drinking water limits on six forms of PFAS, or per- and polyfluorinated substances, which remain in the human body for years and don’t degrade in the environment. A final decision is expected later this year or in 2024.

But the government hasn’t prohibited companies using the chemicals from dumping them into public wastewater systems, said Scott Faber, a senior vice president of the Environmental

Working Group, an advocacy organization.

“We should be treating this problem where it begins, instead of putting up a stoplight after the accident,” he said. “We should be requiring polluters to treat their own wastes.”

The heaviest exposures were in cities and near potential sources of the compounds, particularly in the Eastern Seaboard; Great Lakes and Great Plains urban centers; and Central and Southern California. Many of the tests, mostly in rural areas, found no PFAS.

Based on the data, researchers estimated that at least one form of PFAS could be found in about 45% of tap water samples nationwide.

The study underscores that private well users should have their water tested for PFAS and consider installing filters, said Faber of the Environmental Working Group.

Ohio abortion rights backers submit 700k signatures for ballot initiative

Associated Press

COLUMBUS, Ohio — Groups hoping to enshrine abortion rights in Ohio’s constitution delivered nearly double the number of signatures needed to place an amendment on the statewide ballot this fall, aiming to signal sweeping widespread support for an issue that still faces the threat of needing a significantly increased victory margin.

Ohioans United for Reproductive Rights said they dropped off more than 700,000 petition signatures on Wednesday to Republican Ohio Secretary of State Frank LaRose’s office in downtown Columbus. LaRose now will work with local election boards to determine that at least 413,446 signatures are valid, which would get the proposal onto the Nov. 7 ballot.

“Today, we take a huge step forward in the fight for abortion access and reproductive freedom for all, to ensure that Ohioans and

their families can make their own health care decisions without government interference,” Lauren Blauvelt and Kellie Copeland of Ohioans for Reproductive Freedom, a coalition member, said in a statement.

At a news conference, Copeland said the 422 boxes delivered “are filled with hope and love and dreams of freedom, of bodily autonomy, of health, of being able to say, ‘We decide what happens to us.’”

The ballot measure calls for the establishment of “a fundamental right to reproductive freedom” with “reasonable limits.” In language similar to a constitutional amendment that Michigan voters approved in November, it would require restrictions imposed past a fetus’ viability outside the womb, which is typically around the 24th week of pregnancy and was the standard under *Roe v. Wade*, to be based on evidence of patient

health and safety benefits.

The state’s formidable anti-abortion network has vowed a dogged and well-funded opposition campaign, which could take the price tag for the fight above \$70 million.

Protect Women Ohio, the opposition campaign, downplayed the huge number of signatures submitted, saying they were collected with help from paid signature-gatherers funded in part of the American Civil Liberties Union, which it described as “anti-parent.” Abortion foes contend that the Ohio amendment has the potential to trump the state’s abortion-related parental consent law, though the lawyers who wrote it deny the claim.

“The ACLU’s attempts to hijack Ohio’s constitution to further its own radical agenda would be pathetic if they weren’t so dangerous,” campaign press secretary Amy Natoce said in a statement.

SCOTT BRASS, TMX/AP

Eight people are trapped upside down on a roller coaster, Sunday, at the Crandon International Off Road Raceway in Crandon, Wis.

Wis. probes coaster after riders stuck upside down

Associated Press

CRANDON, Wis. — State officials are investigating how eight people became trapped upside down on a roller coaster — some of them for more than three hours — at a festival in Wisconsin.

The roller coaster’s cars got stuck near the top of a loop around 1:30 p.m. Sunday at the Crandon International Offroad Raceway. Rescue workers arrived to find eight passengers hanging upside down from their safety harnesses. Firefighters used ladder trucks to reach them, securing each one before releasing their over-the-shoulder safety bars, the Crandon Fire Department said.

It took nearly three and a half

hours to get all the passengers down. One person was taken to a hospital.

According to the fire department, a ride operator said something broke down mechanically on the coaster, which had been inspected by the state.

The state Department of Safety and Professional Services is responsible for reviewing plans for amusement parks and inspecting rides in Wisconsin. Spokesperson John Beard said in an email that the agency is investigating and dispatched an inspector on Monday to the scene in Crandon, a city of about 1,700 northwest of Green Bay. He had no further information on possible findings.

2 NJ firefighters die battling blaze deep in ship carrying 5,000 cars

Associated Press

NEWARK, N.J. — Two firefighters were killed battling a blaze that began when cars caught fire deep inside a cargo ship carrying 5,000 cars at a New Jersey port, Newark’s fire chief said

Thursday.

Responding firefighters found five to seven vehicles already on fire when they reached the 10th floor of the cargo ship at Port Newark around 9:30 p.m. Wednesday night. The blaze quickly ex-

tended to the 11th and 12th floors, and as firefighters were pushed back by the intense heat, two of them were lost, Fire Chief Rufus Jackson said at a news conference.

Firefighters weren’t initially

able to find their colleagues and outside rescue companies were called in. They were found and removed from the structure, but they died, Jackson said.

Augusto Acabou, 45, and Wayne Brooks, 49, were found and re-

moved from the structure, but unfortunately they lost their lives, Jackson said.

Shipboard firefighting is a unique skill and Newark firefighters don’t commonly face this kind of fire, Jackson said.

NATION

Methodist exodus fueled by LGBTQ+ policies

Associated Press

More than 6,000 United Methodist congregations — a fifth of the U.S. total — have now received permission to leave the denomination amid a schism over theology and the role of LGBTQ+ people in the nation's second-largest Protestant denomination.

Those figures emerge following the close of regular meetings in June for the denomination's regional bodies, known as annual conferences. The departures began with a trickle in 2019 — when the church created a four-year window of opportunity for U.S. congregations to depart over LGBTQ+-related issues — and cascaded to its highest level this year.

Church law forbids the marriage or ordination of “self-avowed, practicing homosexuals,” but many conservatives have chosen to leave amid a growing defiance of those bans in many U.S. churches and conferences.

Many of the departing congregations are joining the Global Methodist Church, a denomination created last year by conservatives breaking from the UMC, while others are going independent or joining different denominations.

Some 6,182 congregations have received approval to disaffiliate since 2019, according to an unofficial tally by United Methodist

News Service, which has been tracking votes by annual conferences. That figure is 4,172 for this year alone, it reported.

Some annual conferences may approve more departures at special sessions later this year, according to the Rev. Jay Therrell, president of the Wesleyan Covenant Association, a conservative caucus that has advocated for the exiting churches. While most UMC congregations are remaining, many of the departing congregations are large, and denominational officials are bracing for significant budget cuts in 2024.

The numbers of exiting churches are higher than conservatives originally estimated, Therrell said. Legal wrangles have largely been resolved over how much compensation the departing congregations must be paid for their property and other financial obligations.

“For the most part, bishops and other annual conference leaders have been very gracious, and I deeply appreciate that,” Therrell said. “There have been some small exceptions to that, and those are unfortunate, but we're grateful that cooler and calmer heads have prevailed.”

Bishop Thomas Bickerton, president of the UMC's Council of Bishops, said the departures were disappointing.

“I don't think any of us want to

CHARLIE RIEDEL/AP

A Pride rainbow flag flies with the U.S. flag at the Asbury United Methodist Church in Prairie Village, Kan., in 2019. As of last month, more than 6,000 United Methodist congregations have received permission to leave the denomination amid a schism over theology and the role of LGBTQ+ people in the Protestant denomination.

see any of our churches leave,” he said. “We're called to be the body of Christ, we're called to be unified. There's never been a time when the church has not been without conflict, but there's been a way we've worked through that.”

But for those who want “to go and live out their Christian faith in a new expression, we wish God's blessings on them,” he said.

The split has been long in the making, mirroring controversies that have led to splits in other mainline Protestant denominations.

United Methodist legislative bodies, known as general conferences, have repeatedly reinforced bans on LGBTQ+ marriage and ordination, on the strength of coalitions of conservatives in U.S. and overseas churches.

But amid increased defiance of those bans in many U.S. churches, many conservatives decided to launch the separate Global Methodist Church, saying they believed the sexuality issues reflected deeper theological differences.

The departures have been par-

ticularly large in the South and Midwest, with states such as Texas, Alabama, Kentucky and Ohio each losing hundreds of congregations.

In some areas, United Methodists have designated “lighthouse” or similarly named congregations, with a mission for receiving members who wanted to stay United Methodists but whose churches were leaving. The GMC has begun planting new churches, including in areas where United Methodist congregations have remained in that denomination.

With these departures, progressives are expected to propose changing church law at the next General Conference in 2024 to allow for same-sex marriage and the ordination of LGBTQ+ people.

The United Methodist Church has about 6.5 million members in the United States and at least that many abroad, according to its website. The U.S. membership has been in steady decline, while the overseas membership has grown, particularly in Africa.

Therrell said there will be efforts at the 2024 General Conference to provide overseas churches a legal way to disaffiliate, similar to what U.S. congregations have had.

The GMC says about 3,000 churches so far have affiliated with the new denomination, with more expected.

Customers not buying companies' reward reductions

BY WYATTE GRANTHAM-PHILIPS
Associated Press

WASHINGTON — Reward programs, including birthday freebies and discounts, have long been a way for brands to build loyalty and incentivize spending. But now some companies are becoming a bit more stingy — and customers are taking notice.

Last fall, for example, many balked at Dunkin's decision to stop offering a free drink on their birthday and instead give them triple loyalty points on their purchase. On June 1, Sephora started requiring a \$25 minimum purchase for online customers looking to claim a free gift and 250 loyalty points during their birthday month. And Red Robin added a dine-in only and \$4.99 minimum purchase requirement for customers to get their free birthday burger.

Changes to birthday rewards or redemption requirements aren't new. Starbucks, which gives its rewards members a free drink or food item for their birthdays, progressively limited the timeframe for redeeming that gift over the years — from 30 days, to one week, to four days and, finally, to just the date of your birthday in 2018.

MICHAEL DWYER/AP

Many customers balked at Dunkin's decision to stop offering a free drink on their birthday and instead offer triple loyalty points on their purchase.

Some experts say the cost of maintaining loyalty programs, as well as recent impacts of inflation and changes in consumer behavior since the start of the COVID-19 pandemic, are among the reasons why companies may be pulling back.

“While we're assessing our own personal expenses, so are businesses,” Marshal Cohen, chief industry adviser of Circana and retail expert, told The Associated Press. “Businesses have to look and say, ‘Are these programs working? Are they working to full capacity? ... (And) is there another

way of doing this that wouldn't cost us as much money?’”

For Sephora customers enrolled in its Beauty Insider birthday rewards, for example, they can still claim their free gift in person with no minimum purchase. But it costs the company money to ship products sold online, noted Leora Lanz, assistant dean of academic affairs and assistant professor of practice at Boston University's School of Hospitality Administration.

Sephora did not immediately respond to The Associated Press' request for comment.

Despite consumer pushback, some chains have argued adjustments to rewards programs simply reflect how customers behave. In a statement to The Associated Press, Starbucks said it “found that the vast majority of members were using their birthday reward on their actual birthday.”

Dunkin' argued that its new rewards program would give its customers more flexibility and a larger variety of food and drink options — and in a statement to The Associated Press last week, the company said the new program lets “members celebrate their birthday even longer,”

pointing to the three-day window within which customers can triple their loyalty points on birthday purchases.

Still, the announcement felt off-putting for many Dunkin' customers, who shared frustrations online. In the months following Dunkin's announcement, dozens of Twitter users have expressed disappointment over learning that the free birthday drink was gone. Some joked that they “no longer run on Dunkin',” a dig at the chain's slogan, and others suggested that they might take their future business elsewhere.

Consumers are likely to continue to see changes to birthday rewards and customer loyalty programs down the road, Cohen noted.

“The pie is getting smaller for a lot of these discretionary items,” he said, pointing to persistent high costs of living that consumers are facing and the increased competition among businesses vying for those limited dollars. “You're going to see a lot of (companies) assess their programs to try to figure out how to drive business in a more profitable way.”

It's possible this could mean a scaling back of more rewards programs. But there could also be an opposite effect, Julie Ramhold, consumer analyst with DealNews.com, said — noting that some retailers could offer “potentially better birthday rewards to encourage a return to spending on frivolous items.”

WORLD

Earth reaches unofficial record high temperature

Associated Press

Earth's average temperature on Wednesday remained at an unofficial record high set the day before, the latest grim milestone in a week that has seen series of climate-change-driven extremes.

The average global temperature was 62.9 degrees, according to the University of Maine's Climate Reanalyzer, a tool that uses satellite data and computer simulations to measure the world's condition. That matched a record set Tuesday, and came after a previous record of 62.6 degrees was set Monday.

While the figures are not an official government record, "this is showing us an indication of where we are right now," said National Oceanic and Atmospheric Admin-

istration chief scientist Sarah Kapnick. And NOAA indicated it will take the figures into consideration for its official record calculations.

Scientists generally use much longer measurements — months, years, decades — to track the Earth's warming, but the daily highs are an indication that climate change is reaching uncharted territory.

While some countries had colder weather than usual, high-temperature records were surpassed this week in Quebec and Peru.

In North Grenville, Ontario, the city turned ice hockey rinks into cooling centers as temperatures Wednesday hit 90 degrees Fahrenheit, with humidity making it making it feel like 100 degrees.

"I feel like we live in a tropical country right now," city spokeswoman Jill Sturdy said. "It just kind of hits you. The air is so thick."

Beijing reported nine straight days last week when the temperature exceeded 95 degrees and ordered a stop to all outdoor work Wednesday, as the temperature reached 106 degrees.

On Wednesday, 38 million Americans were under some kind of heat alert, Kapnick said.

Scientists have warned for months that 2023 could see record heat as human-caused climate change, driven largely by the burning of fossil fuels like coal, natural gas and oil, warmed the atmosphere. They also noted that La Nina, the natural cooling of the

RAMON ESPINOSA/AP

A pedestrian shades herself with an umbrella Wednesday in Havana.

ocean that had acted as a counter, was giving way to El Nino, the reverse phenomenon marked by warming oceans.

"A record like this is another piece of evidence for the now massively supported proposition that global warming is pushing us into a hotter future," said Stanford University climate scientist Chris

Field, who was not part of the calculations.

One of the largest contributors to this week's records is an exceptionally mild winter in the Antarctic, according to data from the Climate Reanalyzer. Parts of the continent and nearby ocean were 18-36 degrees Fahrenheit warmer than averages from 1979-2000.

Treasury Secretary Yellen visits China to help soothe relations

Associated Press

BEIJING — Treasury Secretary Janet Yellen plans to tell Chinese officials Washington wants healthy economic competition but will defend U.S. trade curbs imposed on security grounds and express concern about Beijing's export controls on metals used in semiconductors and solar panels, a senior Treasury official said Thursday.

Yellen was due to meet Friday with China's No. 2 leader, Premier Li Qiang, as part of efforts to revive relations that are at their lowest level in decades due to disputes over security, technology and other irritants. Treasury officials have said she wouldn't meet with Chinese leader Xi Jinping.

Washington doesn't support decoupling, or disconnecting U.S. and Chinese industries and markets and Yellen will reiterate that message, the Treasury official said. Businesspeople have warned that might harm innovation and growth as both governments tighten controls on trade in technology and other goods deemed sensitive.

Yellen planned to discuss "targeted action" by Washington on trade due to national security or human rights concerns, according to the official, who briefed reporters on condition of anonymity.

Her visit follows one by Secretary of State Antony Blinken, who met Xi last month in the highest-level U.S. visit to Beijing in five years. The two agreed to stabilize

relations but failed to agree on improving communications between their militaries.

China's government has been frustrated by U.S. curbs on Chinese access to advanced processor chips on security grounds. That threatens to delay or derail the ruling Communist Party's efforts to develop telecoms, artificial intelligence and other technologies.

Xi accused Washington in March of trying to hamper China's development.

Washington doesn't use security-related restrictions for economic benefit and considers national security "non-negotiable," the Treasury official said.

The United States wants "healthy economic competition" with China but considers some of Beijing's trade practices unfair, the official said. They said Yellen would detail those concerns in meetings with Chinese officials.

The official cited this week's announcement of Chinese export controls on gallium and germanium as an example of policies about which Washington wants more information. The announcement jolted South Korea and other countries whose industries use Chinese supplies of the metals.

Washington wants to "promote resilient supply chains" and guard against excessive reliance on suppliers in critical areas but doesn't consider that to be decoupling, the Treasury official said.

Revellers fill the town hall square during the "Chupinazo" rocket, which marks the official opening of the 2023 San Fermin fiestas in Pamplona, Spain, on Thursday.

Firework blast begins San Fermin bull-running festival in Pamplona

Associated Press

PAMPLONA, Spain — Tens of thousands of people packed the town hall square in the northern Spanish city of Pamplona on Thursday to celebrate the traditional "chupinazo" firework blast that starts the San Fermin bull-running festival.

Nearly everyone, including many tourists, was dressed in the traditional garb of white trousers and shirt with red sash and neck-

erchief as they sang and shouted.

As the rocket was fired, many doused each other with red or sparkling wine.

The highlight of the nine-day festival is the early morning "encierros," or bull runs, starting on Friday, when thousands of daredevils race to avoid six bulls charging along a winding cobblestoned route to the city's bullring.

Spectators watch from balco-

nies and wooden barricades set up along the course. The spectacle is televised nationally.

The rest of each day is for eating, drinking, dancing and cultural entertainment.

The festival was made famous by Ernest Hemingway's 1926 novel "The Sun Also Rises."

The bulls used in the runs are killed by professional matadors in bullfights each afternoon in the city ring.

Handling the heat

Here's how to keep cool, stay safe during the hottest time of the year

ROGELIO V. SOLIS/AP

By RIO YAMAT

The Associated Press

Scorching heat across the U.S. already has caused more than a dozen deaths in Texas alone and led to mounting misery for millions.

And the official end of summer is still months away. Here's a guide on how to keep cool and stay safe, wherever you are, in the punishing temperatures.

Why is extreme heat dangerous?

Heat kills more Americans than any other weather event, including tornadoes and flooding, even though most heat-related deaths are preventable through outreach and intervention, according to the Environmental Protection Agency.

"Heat is the silent killer. No one thinks about it," said Ben Zaitchik, a professor and climate scientist at Johns Hopkins University whose research includes heat waves. "It's getting hotter just about everywhere. That means even without a particular weather phenomenon, we're seeing temperatures we aren't used to, and that in its own right is a risk."

The body normally cools itself by sweating, but extreme heat can interrupt your ability to do that, potentially leading to heat exhaustion or heat stroke, organ failure or death.

Older adults, young children and people with chronic illnesses like diabetes are most at risk. But that doesn't mean healthy people are immune, said Ashley Ward, director of the Heat Policy Innovation Hub at Duke University's Nicholas Institute for Energy, Environment and Sustainability.

The heat can have adverse effects on people who work or exercise outdoors, for example, and also homeless people or those without air conditioning.

What are signs of heat-related illness?

You might be experiencing a heat stroke if your body temperature reaches or surpasses 103 degrees. Other symptoms include nausea, headaches, thirst and a fast and strong heart rate.

The Centers for Disease Control and Prevention says heat stroke is a medical emergency and recommends that people with symptoms call 911.

Symptoms of heat exhaustion include heavy sweating, muscle cramps, dizziness, vomiting and cold, pale or clammy skin. The CDC says you should seek treatment if such symptoms worsen or last more than an hour.

What if I don't have air conditioning?

Spending just a few hours in an air-conditioned space can help your body stay cooler when you go back into the heat, according to the CDC. So take advantage of public spaces with air conditioning, like libraries and shopping malls.

During the day, cover your windows, turn off the lights and avoid using the stove or oven. If you live in a dry area, hang wet towels to cool the room.

At night, if temperatures drop, keep your windows and shutters open.

Ward, the Duke researcher, said it's also important to think outside the box if you don't have air conditioning. After taking a cool bath or shower, for example, sit in front of a fan while your skin is still damp.

She also recommends soaking your feet above the ankles and arms above the elbows in cool water for 10-15 minutes.

If you only have one fan, Ward said, prioritize creating a cool sleeping space rather than common areas.

"This is when your body really recovers from heat

exposure during the day," she said.

What if I have to be outside?

Stay hydrated, and don't wait until you're thirsty to drink fluids.

Limit your sun exposure by staying in the shade or using an umbrella. Wear sunglasses and a wide-brimmed hat or cap.

If you work outside and have access to cool water, consider soaking your shirt and repeating the process every hour or whenever it dries out, Ward said.

Homeless people should reach out to shelters for information on local resources, including temporary cooling centers.

Do I have to worry about burn injuries?

Doctors at Arizona and Nevada burn centers have warned of injuries from contact with superheated roads and other surfaces.

This can happen, for example, if you collapse from dehydration or heat stroke and can't get up off the hot ground.

But burns can also come from touching hot surfaces like leather seats or poolside concrete, so be careful when reaching for a metal door handle or a seat belt buckle and when getting out of a pool.

How do I keep my pets safe?

Schedule your outdoor walks for when it's coolest, like the early morning or evening, and protect your furry friends' paws with breathable shoes.

Keep pets inside if you can, and if they must go out, make sure they have access to shade.

"A doghouse by itself is not shade," Ward said. "That's an oven."

Never leave a pet in a hot car.

Healing through stories

Retired Green Beret Scott Mann examines 'holistic horror of war' in film, play 'Last Out'

By **BRIAN McELHINEY**
Stars and Stripes

Storytelling helped Army Lt. Col. Scott Mann deal with post-traumatic stress after serving in the Afghanistan War and retiring in 2012. A decade later, it's helping him — and others — deal with the fallout of that war all over again.

In August 2021, as the Taliban took over Afghanistan and the U.S. scrambled to evacuate its allies and citizens, former Green Beret Mann was busy launching the film version of his play, "Last Out: Elegy of a Green Beret," on Amazon. The play, written by and starring Mann, tells the story of a Green Beret who is trapped between his family obligations and his mission in Afghanistan as he struggles to ascend to the mythical warrior afterlife of Valhalla after getting hit with a roadside bomb.

Mann soon switched gears, founding Task Force Pineapple with other veterans to help more than 1,000 Afghan refugees escape Kabul.

"It was all-consuming until my wife had my best friends stage an intervention somewhere around October after the collapse, and I stepped away from it and got myself healthy again," Mann said recently from his home in Tampa, Fla.

"I was not in a good place ... coming out of the Pineapple experience, and even writing the book ("Operation Pineapple Express," published in 2022) because interviewing all of those folks that made it, those folks that didn't, the veterans. I have interviewed just hundreds of veterans — iconic special operators — and watching them weep in front of me and telling me that they're never gonna let their son join the Army, and just the moral injury that I felt and so many of my peers who fought this war for 20 years felt and the families. So there was a lot of just heaviness coming out of that."

Around this time, Mann got a call from actor, musician and veterans advocate Gary Sinise. Sinise had seen the film version of "Last Out" through mutual friend and songwriter John Ondrasik, better known as soft-rock piano balladeer Five for Fighting.

"He was struggling, Scott, with ... what

did we do and why did we do it, and he was losing friends who were committing suicide, and terrible different things were happening," Sinise told Stars and Stripes in May. "Much like the guys back in Vietnam — the veterans that I met back in the '80s who wrote a play called 'Tracers' because they were struggling with their own service and coming home from that war to a divided nation and a nation really that had abandoned them. The healing play that they'd made was very, very positive for them, and Scott did the exact same thing."

The partnership with the Gary Sinise Foundation has led to a summer tour for "Last Out" that kicked off with performances in San Diego and Phoenix, and continues through October with stops in Sioux Falls, S.D.; Franklin, Tenn.; Mil-

Cooper Mann and his father, Scott Mann, backstage at a show in San Diego in May. Cooper Mann plays the son of the main character in "Last Out."

waukee; and Topeka, Kan. Along with a preview show at Sinise's Steppenwolf Theatre in Chicago — where Sinise presented the Vietnam-era play "Tracers" in the early '80s — these are the first performances of the play since COVID, and more significantly, since the end of the war in Afghanistan.

"When Gary called me and said, 'You know, Scott, this reminds me a lot of Vietnam,' I was walking in the driveway ... and I just kind of fell apart on him," Mann said. "And I'm like, 'Gary, it is a lot like that. And if we don't do something, we're

on the front end of a mental-health tsunami.' I mean, I told Congress this when I testified to the House Foreign Affairs Committee about Pineapple. I was like, you guys don't understand; I mean, you're talking about 73% of the Afghan War population feels betrayed. This is really bad, and on top of all, the suicide rate.

"So coming back to the play, when Gary brought that up, we both agreed that this was a preexisting asset that could be put into play right now to help veterans make

FROM PAGE 14

meaning out of their lived experience while simultaneously showing politicians and civilians the impact.”

Mann wrote the play over several years and premiered it in Tampa in November 2018. At the time, Mann and his team of actors and crew — all veterans and military family members with little to no theater experience — “thought it was a one-time thing,” according to the play’s website. But audience reaction led Mann to mount a 16-city, 28,000-mile tour out of a U-Haul van in 2019 through his nonprofit, The Heroes Journey.

“Last Out” was originally developed as a one-man show with Mann starring as a career Green Beret, Master Sgt. Danny Patton. But as the story progressed, Mann knew he had to involve other characters — namely, Patton’s best friend and fellow Green Beret Kenny Suggins (portrayed by Lenny Bruce, also a former Green Beret who served in Afghanistan with Mann), wife Lynn (Heather Corrigan) and son Kaiden (Cooper Mann, Mann’s son).

While not directly autobiographical, much of the play is based on Mann’s own experiences. Suggins is based on Clifford Patterson, one of Mann’s closest friends who was killed on 9/11 at the Pentagon. And Lynn Patton takes inspiration from Mann’s wife, Monty Mann, and her experiences at home while Mann was in Afghanistan.

“I started asking my wife questions about what happened when I was gone, what happened when I was deployed, and at first she was resistant — almost agitated about it,” Mann said. “At this point I’d

been retired for seven years, and she’s like, ‘Why are you bringing this stuff up? I don’t want to talk about this.’ And there were times when we would kind of go at it. And then finally she told me, ‘Babe, I had to keep all this from you to keep you alive; I really don’t want to do this.’ And I said, ‘Well I think if we can put this out there, it’s going to validate what you and a lot of other family members did.’”

That seems to be exactly what has happened. Audiences, often made up of veterans and family members not just from the recent Middle East wars, but stretching back to Vietnam, Korea and World War II, participate in “talkbacks” at the end of the show, sharing their own experiences with Mann and each other.

“We had the sister of a Green Beret sergeant major, she stood up and she said, ‘You guys told me in two hours what my baby brother has been trying to tell me for five years,’ ” Mann said. “And so you see these families sitting together looking at the war from each other’s perspective, because the way the play works is the protagonist, Danny the Green Beret, he’s stuck between his living room and his fire base after being severely wounded, and so he can’t ascend. And so you see both, and the audience is affected by that in a very profound way because a lot of the home front stuff, no one really understands or knows.”

But the play also was written for civilians to help them understand “the holistic horror of war,” as Mann describes it.

“I’m a father of three boys. My oldest son a few years ago told me he was gonna join the Army and he wanted to be a Spe-

cial Forces guy, and that just hit me right between the running lights,” Mann said. “Because at that point we were over there, we were in this war that — most people didn’t even know that we were there. ... I can’t tell you how many times people would say to me in airports, ‘We’re still in Afghanistan?’ And now my son’s gonna go fight a war that I didn’t finish. That for me became something that I felt like that had to be fixed, that had to be adjusted.”

“... My vision was that I could tell a story kind of like ‘It’s a Wonderful Life’ with body armor, in a way that the audience could really go for the ride and feel what it’s like to say goodbye to your wife at the airfield, to feel what it’s like to hold your buddy in your arms in his final moments because he did what you asked him to do,” Mann said.

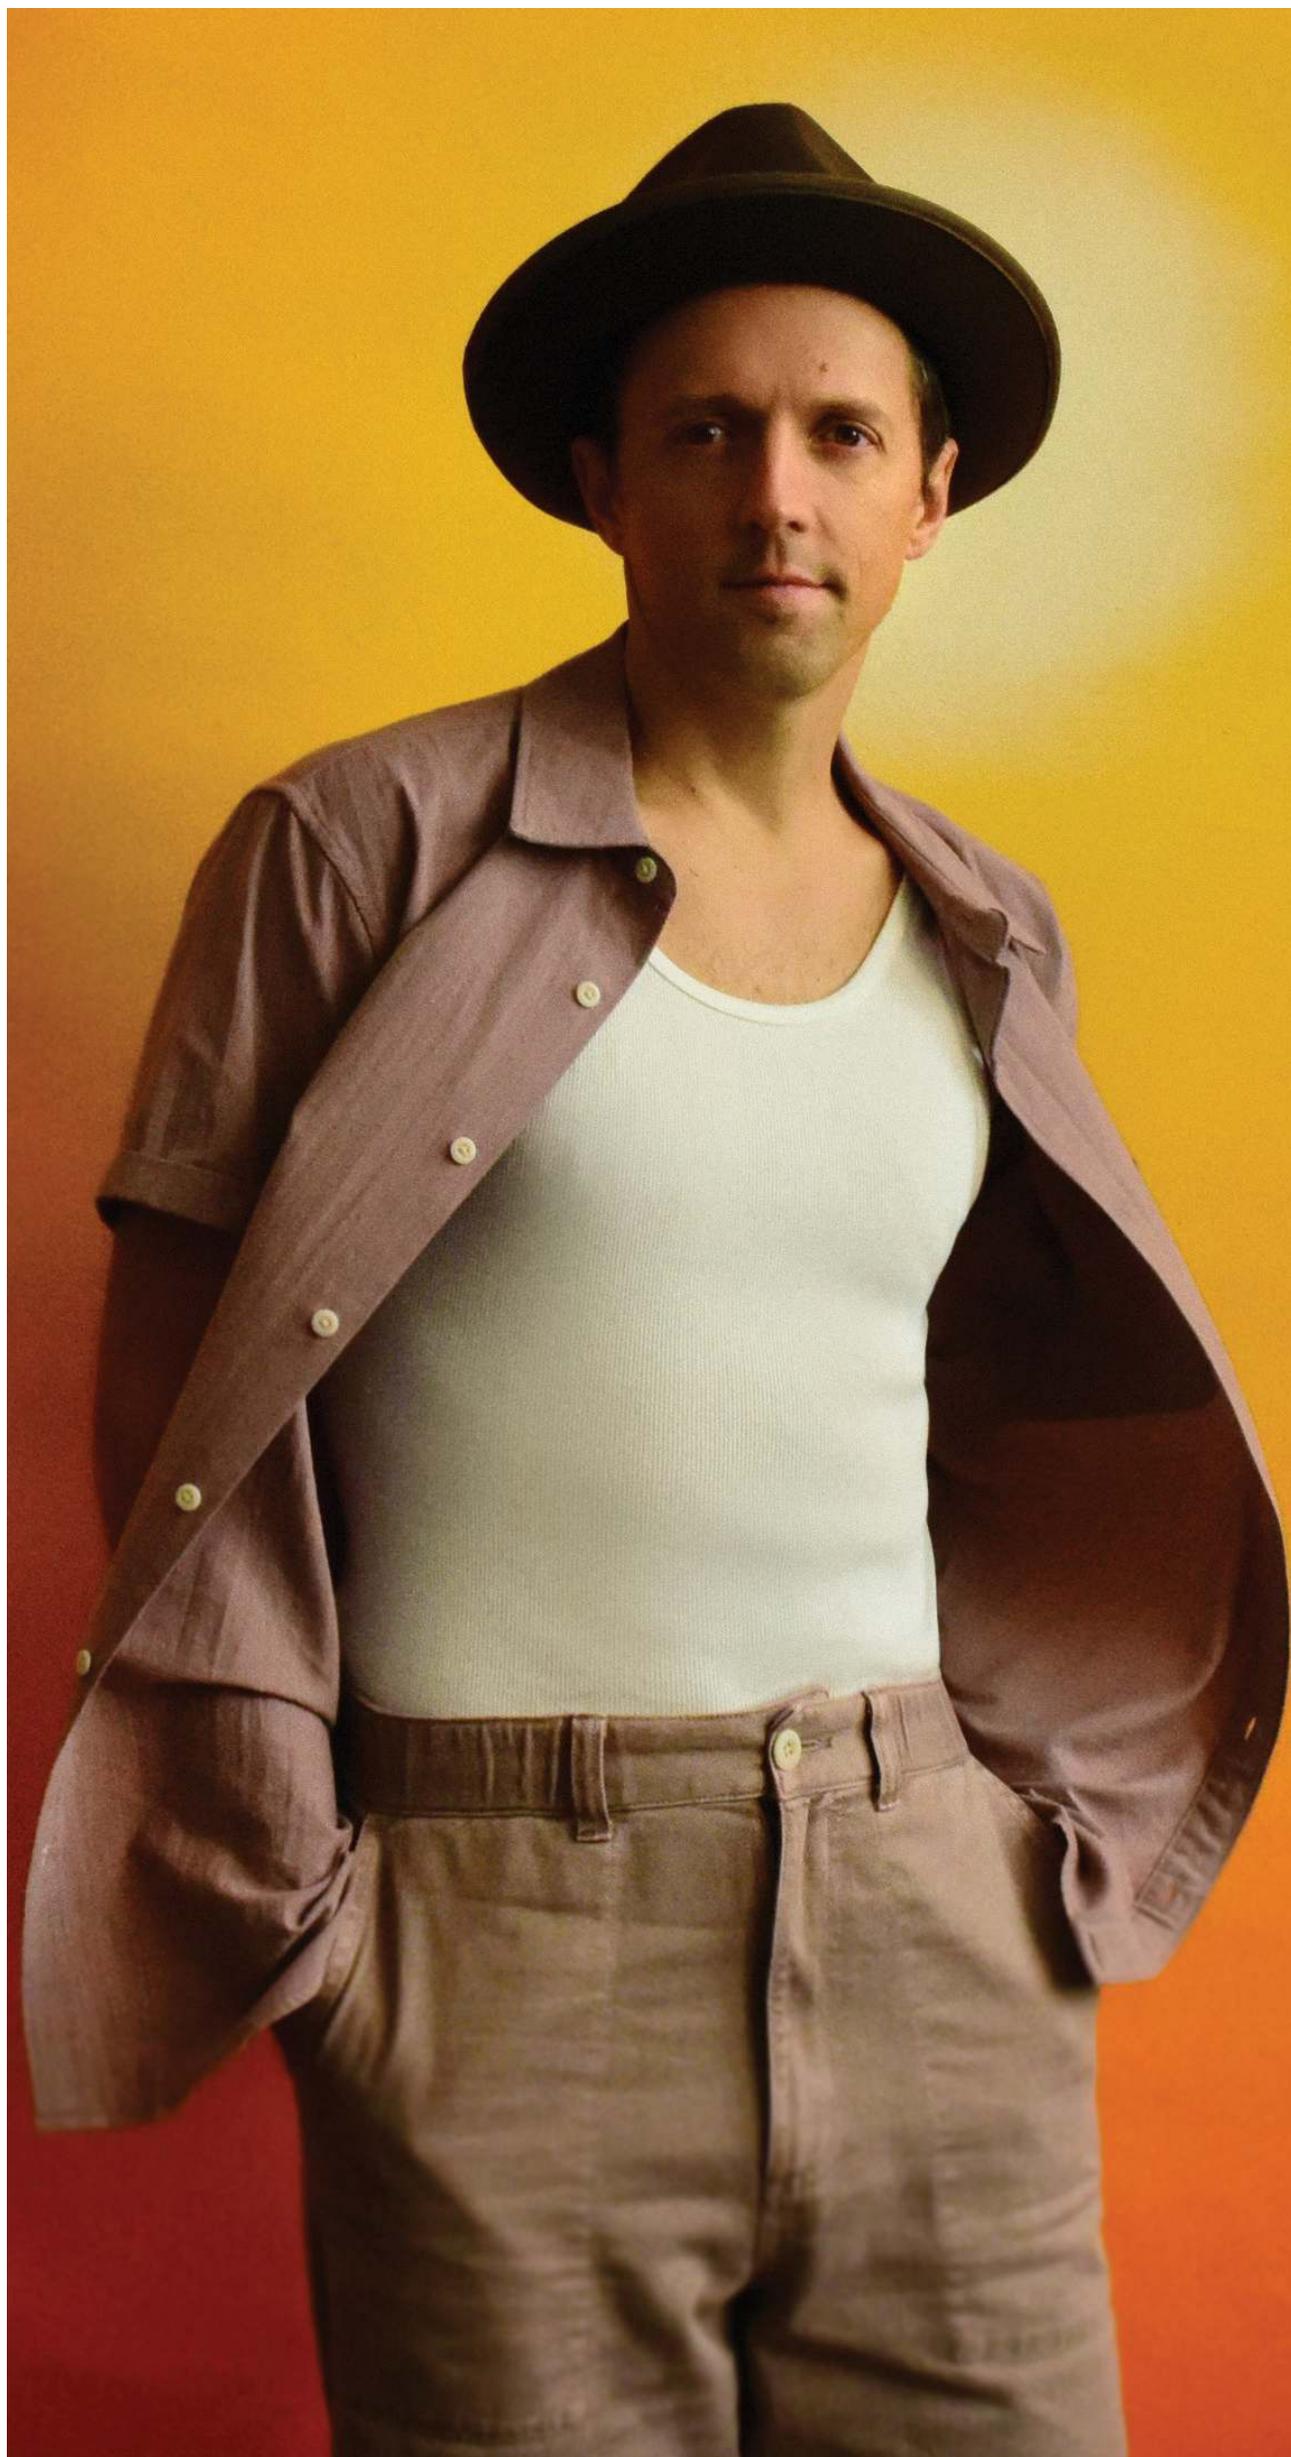

“The irony in all of this is that we’ve been telling stories — warrior storytelling — since we’ve been fighting wars,” Mann said. “I mean, if you look at most of Shakespeare’s plays, that’s what they do. And civil society has used storytelling as the primary way to bring veterans home from war, in every civil society on the planet, and we’ve lost that.”

To see a military spouse watch a news report with no dialogue in a scene, and just fall to her knees and scream — I mean, it rocks the civilians to the core.”

That mission seems even more important now with veterans struggling with how the Afghanistan War ended. Mann hopes to continue touring the show in partnership with the Gary Sinise Foundation, and plans to film the show in a live setting, a la the filmed version of “Hamilton.”

“The irony in all of this is that we’ve been telling stories — warrior storytelling — since we’ve been fighting wars,” Mann said. “I mean, if you look at most of Shakespeare’s plays, that’s what they do. And civil society has used storytelling as the primary way to bring veterans home from war, in every civil society on the planet, and we’ve lost that.”

MUSIC

Floating in the middle

Mraz crafts dance album in response to singer hitting his 40s

BY GEORGE VARGA

The San Diego Union-Tribune

Now 46, multi-Grammy Award-winner Jason Mraz was born in 1977 — the same year Rock & Roll Hall of Famer Jerry Lee Lewis, then 42, released his melancholic country-music single “Middle Age Crazy.”

Almost no one listening to Mraz’s often buoyant new album, “Mystical Magical Rhythmical Radical Ride,” will be reminded of Lewis belting out such high-octane 1950s rock classics as “Great Balls of Fire” and “High School Confidential.” But there are clear thematic similarities between some of Mraz’s musically upbeat new album and the downbeat “Middle Age Crazy,” on which the now-deceased Lewis reflected: And today he’s forty years old, going on twenty / Don’t look for the gray in his hair / ‘Cause he ain’t got any.

“I thought I’d be done at 40,” said Mraz, who — six years later — has responded to middle-age with a surprise left turn.

Half the songs on “Mystical Magical Rhythmical Radical Ride” embrace dance-pop and vintage disco. They were inspired, in part, by such Mraz favorites as Chic, Michael Jackson, Donna Summer, The Bee Gees and Jamiroquai. More on that in a moment.

“When I was a little kid, I saw being in your 40s as old age,” Mraz recalled. “As a teen, my 20s were something to aspire to — 40 always seemed just out of reach. I thought I’d be done (with music) by then and the ideal life would be a family, kids and moving on.

“When you turn 40, it’s exciting. I celebrated my 40th birthday performing at the Hollywood Bowl. But when you turn 42, nobody cares.”

Not coincidentally, Mraz muses about having turned 42 in the lyrics to “Little Time,” a lilting ballad from his new album. In the same song, he also ponders what might happen “if I reach 65.”

The press materials accompanying “Mystical Magical Rhythmical Radical Ride” make several references to Mraz being in his 40s. Such pulsating, four-on-the-floor new songs as “Getting Started,” “I Feel Like Dancing” and “Feel Good Too” — the album’s opening three numbers —

MUSIC

Mraz: Jackson among inspirations for latest album

FROM PAGE 16

sound like energetic odes to dancing the night away with youthful joy, if not outright abandon.

Or, as this usually sunny troubadour put it in a statement when “I Feel Like Dancing” was released as the album’s first single in February: “Songs appear out of a real necessity, and this song appeared as I struggled with identity and self-worth in my mid-40s.”

Mraz paused for thought when asked if he has undergone a midlife crisis.

“I don’t think I’ve had a midlife crisis just yet,” he replied. “But maybe I have — and I haven’t lived long enough past it to see that: ‘Oh, yeah, that was definitely a midlife crisis.’”

“I have absolutely shaken things up, over and over, for myself. I can see that pattern reappearing throughout my life. And every time I do, I rediscover myself through the power of songwriting. And I think: ‘I’m OK.’”

‘A lot of vanity in my youth’

The pros and cons of aging can differ from person to person, as Mraz readily acknowledged.

Superficial concerns can fade. Wisdom can be gained from experience. But for a veteran artist who has been in the public eye for more than 20 years as music trends constantly change — sped-up songs on TikTok, anyone? — feeling secure about your position can be challenging.

“The older I get, certain worries and stresses just sort of fade away,” Mraz said. “I don’t stress as much about how I look or surface-level things, like fashion. As a young person, I cared about: ‘Do I fit in? How do I look?’ There was a lot of vanity in my youth.”

“The cons, as you get older, are that I’m not really in the youth category anymore. Here I am, making a pop album and dance album. In music, those categories are dominated by young people, 18-28, and always have been.

“So, there’s this feeling of: ‘I’m not really in the little kid category any more — or the older group. I’m floating in the middle.’”

Middle age is not the only factor that inspired Mraz to write and record new songs specifically designed to encourage him — and his listeners — to party down and shake their collective booty.

He also credits his mother, June Tomes, for encouraging him to make an overtly pop-oriented album. Mraz wasn’t getting any younger, she noted, so he should do a pop album “before it’s too late.” He concurred. The liner notes for “Mystical Magical Rhythmic Radical Ride” dedicate the album to “Mama June.”

Speaking recently from his Oceanside, Calif., farm home, Mraz — who married Christina Carano in 2015 and recently announced their divorce — stressed that he specifically sought to make a pop album that embraced old-school music values.

“I always really wanted to make a dance-pop album, but not an electronic (dance) album that leaned on computer programs and drum machines,” he said.

“I wanted to make human dance music. So, sonically, that’s what our effort was. And thematically, I noticed that what was missing from my shows — year after year — was that I didn’t have enough up-tempo songs that could turn the show into a dance party for my audience and myself.

“How would I rate my dancing? Right

SHERVIN LAINEZ

Jason Mraz will soon take the up-tempo “Mystical Magical Rhythmic Radical Ride” on tour.

now, about 3 out of 10. But I want to be better. And that’s how a song like ‘I Feel Like Dancing’ finds its way through my subconscious and lands on the page. Because I try to generate experiences I haven’t had yet, or want to have, and songs can help.”

For at least half the selections on “Mystical Magical Rhythmic Radical Ride” — whose title comes from the lyrics to “Disco Sun,” a song on the album — Mraz takes a deep dive into the music of the 1970s and early 1980s. To cite one case in point, the slinky grooves, sleek instrumental work and deftly executed higher-register lead vocals on “I Feel Like Dancing” evoke the music of Boz Scaggs and Michael Jackson in their respective primes.

“Boz probably subconsciously — I’ve got a few of his records,” Mraz said.

“Michael? I definitely had his posters on my wall growing up. Probably the first song I ever danced to was something on his ‘Thriller’ album, when I was 4 or 5, and was asking my family what dancing was and where the beat was.

“So, yeah, Michael has always been an influence. But making this album, I didn’t really study those albums by him or Boz. I found myself listening to Nile Rodgers’ records with Chic, Giorgio Moroder’s ‘Flashdance’ soundtrack album, Donna Summer and The Bee Gees. I was trying to understand how great dance music was made.”

Nine of the 10 songs on “Mystical Magical Rhythmic Radical Ride” were co-written by Raining Jane, the four-woman Los Angeles band Mraz first collaborated with in 2007.

“There was a concerted effort to make this in tandem,” he said. “And I love giving Raining Jane credit, because they were in the studio with me, they were part of the writing process, and they will be on my summer tour.”

Mraz’s new album reunites him with Sweden’s Martin Terefe, whose recording production credits range from Train and Mary J. Blige to Yungblud and Coldplay.

Weed and mushrooms

Terefe produced Mraz’s 2008 album, “We Sing. We Dance. We Steal Things.” It in-

cludes two of Mraz’s biggest hits — “I’m Yours” and “Lucky” (the latter featuring Colbie Caillat) — and remains his biggest-selling release with sales of nearly 5 million.

Mraz has made five albums since then — including 2020’s reggae-inspired “Look for the Good” — and his sensitive singer-songwriter persona has remained intact. “Mystical Magical Rhythmic Radical Ride’s” well-balanced mix of thumping, unabashed dance-pop songs and earnest ballads could be just the right combination to propel him back to the upper reaches of the national sales charts.

“This is the first album since ‘We Sing. We Dance. We Steal Things.’ that feels the most like a sequel to that album,” Mraz said, “more so than anything I’ve made since then, because of how ...”

His voice trailed off.

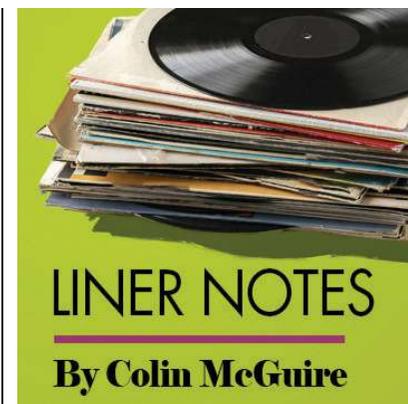

“I don’t know,” he said a moment later. “I don’t know what to tell you. I’m just happy this album is out. It feels new and yet familiar, like something I would have done in 2008 but it happens to be in 2023.”

In the lyrics to his new song “Disco Sun,” Mraz favorably references “weed and ‘shrooms.” He provided a very specific response when asked what role weed and hallucinogenic mushrooms play in his creative process.

“I call them portals, if you will,” he said. “They are portals to another dimension, like opening a gate to a garden, like going to visit somewhere. So, a toke of weed or a dose of mushrooms will take you into another state for feeling things or seeing things I may have suppressed, things I need to atone for, relationships that need to be (improved).

“Weed and mushrooms will help me (address) some thoughts that need attention. And they’ll also — if I’m lucky going inside one of the portals on a dose of mushrooms or cannabis — will (enable me to) resonate with something I’m listening to. Or I’ll hear a melody I hadn’t heard before. And I’ll try to bring that back through the portal to a sober state.

“It’s nothing I rely on. But I enjoy experimenting with it as a portal, visiting a place to have an experience, like a museum or a magical garden.”

Billboard Hot 100 No. 2:
Luke Combs – ‘Fast Car’

Note: After spending some time fluctuating at the top of the chart, Morgan Wallen’s “Last Night” came in at No. 1 on the Hot 100 for the first week of the month. Because we wrote about that song in April, we figured we’d move on to what landed at No. 2 this week.

Combs isn’t the first to cover this poignant Tracy Chapman gem of a hit that turned 35 years old in April. He also won’t be the last. It’s a testament to Chapman’s prowess as a songwriter more than it is much anything else and if you don’t believe that at face value, just consider how relatable (if not heartbreaking) this starry-eyed tale of a tune is, no matter whose voice is behind it. In that sense, Combs does good by Chapman, staying loyal to its original incarnation, adding little to Chapman’s original outing right down to the middle of the song when Combs admirably doesn’t even compromise working in a market being a “checkout girl.”

The problem, much like the many who came before Combs, is that Chapman’s tenderness is lost in both translation and modernity. “Fast Car” is a great song for a lot of reasons, but one of them has always been Chapman’s understated vocal delivery — a wrinkle in the performance that nobody outside of the track’s author will ever be able to properly convey. Combs tries in the song’s early moments, but by the time things come full circle, it turns out to be just another grunt-y country radio rock song by just another grunt-y country radio rock guy.

Still, the core of the song is there, which means Combs could do a lot worse if he’s looking to cover late-’80s coffee house rock in the year 2023. “Fast Car” has aged like a fine wine through the years, proving its worth as a cautionary tale that highlights the struggles that go along with being a woman cycling through the throes of poverty.

In some ways, it might have been easier to think in 1988 that 35 years later, these issues would have been solved by now. Because they aren’t, Chapman’s vulnerability feels just a little more profound, even if someone else is singing her words. Combs doesn’t necessarily add a chapter to the novel, but at least he’s able to keep the story alive by telling it to a modern audience.

And that ought to count for something.

Battle, adapt and bend time

Upcoming Prince of Persia: The Lost Crown adds fighting features to Metroidvania genre

BY GIESON CACHO
Bay Area News Group

Although one Prince of Persia has been delayed, another one is closer to reality. Ubisoft revealed that a new entry is on the way, and this offering adds a Metroidvania twist. Titled Prince of Persia: The Lost Crown, it follows the exploits of Sargon, a fearless dual sword prodigy who is one of the Immortals tasked with rescuing the kidnapped Prince Ghassan who was taken to the cursed city of Mount Qaf.

In the short demo I played at the Ubisoft Forward event, I got a sense of the gameplay. Combat has a rhythm to it as players have a melee attack button and a ranged attack one. With a limited health bar, players can only take a few hits so knowing enemies' attack patterns and anticipating their strikes is important.

Digging into combat

They can dodge out of the way with a dash, but a better move is a parry, which players will need to time. If done correctly, players will build up their Athra's Glow meter for more powerful attacks. It takes a while to adjust to the combat. It's about striking when there's an opening, defending and judiciously using the bow and limited arrows. He also has a

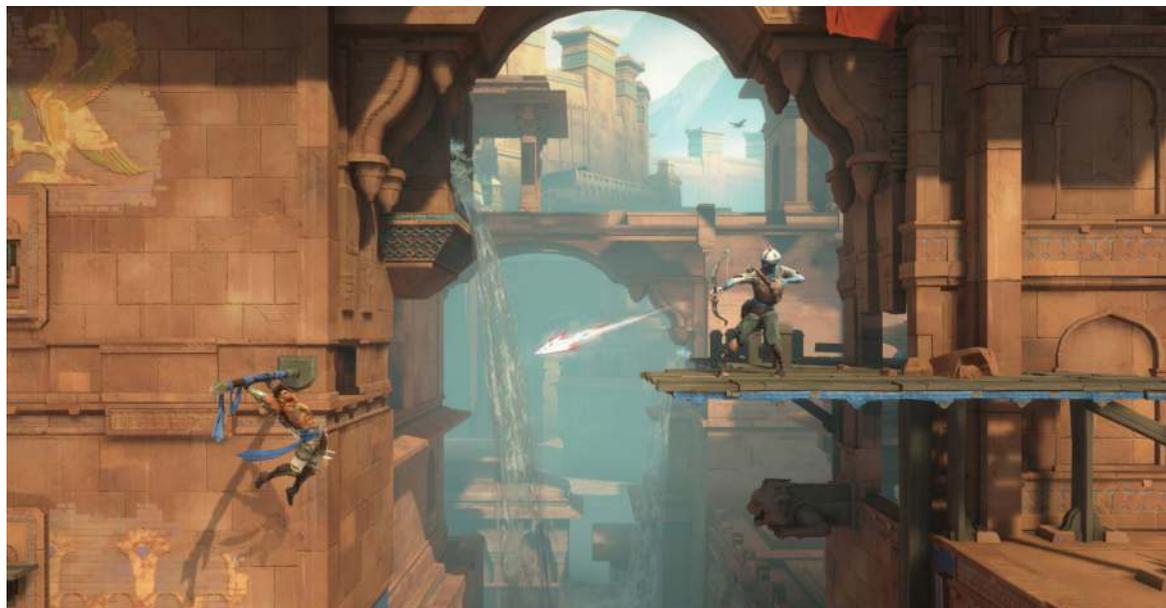

chakram ("Xena" fans should know what that is.) that takes a while to charge up, but returns to players like a boomerang.

Players can't button mash their way to greatness. They have to fight and adapt. One of the abilities that was unlocked was the Shadow of Simurgh that lets Sargon teleport back to a previous marker. It gives him another option for maneuverability and when combined with selectable perks tied to amulets, the teleporting return trip can damage foes. These elements lend The Lost Crown the feel of a fluid fighting game.

Traversal, platforming

The other major part of the gameplay is traversal. In the demo, Sargon doesn't have a double jump, but he does have other ways to get around. He can wall jump up to higher areas or grab on poles to swing up. One area of the demo highlighted some of the platforming players have to do. Swinging spiked cylinders create a dangerous obstacle, and players have to get around it via some Ori-style jumping and dashing. Ducking in the right spots also helped out.

In another area, players will ascend to another part of Mount Qaf by hitting rifts that rewind time and lead to an enormous broken statue reforming. Again,

UBISOFT/TNS photos

Sargon is an agile character capable of wall jumps and leaps from poles in Prince of Persia: The Lost Crown.

it looks like The Lost Crown will have time-bending mechanics built into powers and level design.

The demo did a good job of giving players a taste of the basics. The Lost Crown has the bones of a good Metroidvania game though parts of the world were closed off. Trees act as save points. That's where players can refill health and also fill up on potions to heal. I started off with one, but a shop keeper had an additional potion but it required more in-game currency than I had. The currency are crystals that enemies drop or players can grab by shattering them in the environment.

The boss fight

Everything culminated in a boss fight against Jahandar, a manticore. He's a tough monster, and it's a good test of players' parrying abilities. That's key to taking the creature down. The reaction window is broad so players who can anticipate the attack will be fine. They can even parry its charge attack. The me-

Although it looks like an uneven matchup, Sargon has plenty of tricks that can help him defeat the manticore Jahandar in the boss fight.

tered abilities tied to Athra's Glow is key to survival after players use up the potion.

At Level 2, players have access to a heal that's tied to a small area. As long as players are in the narrow healing zone, they can recover full health. The Level 1 attack move is a burst attack that automatically deals a combo against the monster. It takes patience and persistence to defeat Jahandar, but it's a satisfying experience.

The last area to note is that The Lost Crown has a visual style comparable to anime. During the

battle, players will notice that the Athra Glow attacks seem inspired by the likes of "Dragon Ball Z" or "Naruto." It's a touch that shows off the artistic touch of the team.

Prince of Persia: The Lost Crown is scheduled for release Jan. 18, 2024. It will launch on PC, PlayStation 5, PlayStation 4, Xbox Series X and Series S, Xbox One and the Nintendo Switch. The Switch version runs well at 60 frames per second.

The Crew Motorfest takes players on curated trip to Hawaii

BY GIESON CACHO
Bay Area News Group

When it comes to open-world driving games, The Crew always took second place to Forza Horizon. Although the former's map was larger by covering a condensed version of the United States, the visuals and content left something to be desired. It was a case of quantity over quality.

For its next iteration, Ubisoft Ivory Tower is taking a cue from its rival and focusing on a smaller area. In this case, they're going to the Hawaiian island of Oahu. The move will remind fans of Test Drive Unlimited, a 2006 Atari-published game that was also inspired by the locale. The big difference between that title and this one is that there's more than a decade worth of gaming trends behind The Crew Motorfest.

Ubisoft's racing title revolves around the concept of playlists. It's a curated set of races focused on particular themes and they're associated with distinct playstyles. With the Motorsports playlist, players race Formula 1 cars and they'll have to worry about pit stop strategy as their tires wear down. If they don't change them out, the rubber loses its grip and the vehicles turn squirrely.

The Vintage Garage playlist takes player in vehicles from the 1950s and beyond. What's notable about this experience

UBISOFT/TNS

The Crew Motorfest takes place in Hawaii and focuses on a vehicle festival on the island.

is that the vehicles start off and handle as they would stock. That means players won't have GPS or other modern advancements that have now become standard. Even the music is era-appropriate. As players move through the decades, the vehicles acquire features such as ABS, and they'll gain more modern conveniences.

The Made in Japan playlist celebrates drifting, customization and other elements of the nation's car culture. The race I checked out had me going through the mountains and drifting on the switchbacks (a la Takumi on Mount Akina for you Initial D fans) while driving through the cityscape, the visuals were colored in neon. Meanwhile, the Lamborghini playlist zeroed on the supercars and gave players a history lesson on the brand.

In the sample race, I played a bit of the road experience, and it resembled something you would find in Forza Horizon. The game even features different perspectives including a cockpit mode.

Beyond that, The Crew Motorfest will have a free drive and online competitive activities. Players can even import their collection from previous games. It will also have post-launch support comparable to previous efforts.

The game looks better than past efforts, and it shows promise. Perhaps, it goes to show that bigger isn't necessarily better, and that a smaller more focused game creates a better experience.

Players can find out when The Crew Motorfest releases Sept. 14 on PlayStation 5, PlayStation 4, Xbox Series X and Series S, Xbox One and PC.

Lethal and hilarious

Olyphant returns in Elmore Leonard-inspired 'Justified: City Primeval'

By LUAINE LEE

Tribune News Service

Even though he's been dead for 10 years, author Elmore Leonard is still intriguing audiences. His character, Raylan Givens, is due back July 18 when FX premieres "Justified: City Primeval."

The eight-part series features Givens, the stalwart U.S. Marshal that Leonard first created in his book "Pronto." The character appeared in three more stories with "Fire in the Hole," adapted into TV's popular "Justified," which reigned for six seasons.

This time, the Stetson-clad hero finds himself in a new kind of badlands, Detroit.

"We were excited to embrace Detroit as a character in this piece," said one of the show's producers, Dave Andron. "Putting Raylan as a stranger in a strange land. And also, it's the land of Elmore. 'City Primeval: High Noon in Detroit' is his first crime novel, and he really embraced Detroit."

Leonard's characters, like Raylan Givens, jump off the page full-fledged and always unique. In an interview shortly before he died in 2013, he explained his method: "I feel more comfortable using the character's point of view rather than my own," he said.

"The character looks out and he's going to have an attitude about that smog or that sunset, and you're gonna hear it. You're gonna hear that attitude. If I describe it, you're going to hear a mediocre description. I always write from a point of view," he said.

Timothy Olyphant, who plays Givens, says he had no compunctions about returning to his latter-day hero. "Elmore Leonard and (writer/executive producer) Graham Yost gave us so much material to launch what I've always thought was potentially numerous stories," says Olyphant. "I thought as long as we were still in the Elmore Leonard world and the Graham

Yost world that the two of them created, I just thought I'd love to be there for it."

That Elmore Leonard world is both lethal and hilarious, often tickling the underbelly of society.

"I learned how to write by studying writers that I liked a lot," Leonard said in the 2013 interview. "Hemingway, I studied him so closely until I realized that the structure, the flow of it, the prose itself, that when I'm parodied, I see Hemingway. But I didn't share Hemingway's attitude about life, about himself. I didn't take everything that seriously. I saw a little more humor in life than he did. So I saw other others — John O'Hara, Steinbeck, Richard Bissell. His '7½ Cents' became 'Pajama Game.' I read a couple of his books (and thought), 'That's the sound I want.'"

"All the time, from the very beginning, I was very conscious of style," Leonard said, "developing my own styles. The way you write most naturally, most effectively, THAT'S your style."

Calling FX's "Justified: City Primeval" a sequel or a spinoff is not exactly accurate. "We weren't trying to recapture the show that we did," says executive producer and director Michael Dinner.

"We were trying to recapture the tone, Elmore's tone. And this is a book — 'City Primeval' is a book that we really loved the characters in the book. And we thought it would be interesting to pick up with Raylan and catapult him into this story and see him some years down the road where his road is lot shorter in front of him than the road behind.

"So, we felt we could take this story that we really liked a lot, and we could inject Raylan into it and tonally do a show that's similar, but also let the show that we did grow up a little bit," says Dinner. "We felt really good about that. We felt that what we've done is something that is true to the show, but not the same show. And we think it's pretty entertaining."

FX/TNS

Timothy Olyphant stars as Raylan Givens in "Justified: City Primeval."

Alan Alda's boots, dog tags from TV's 'M*A*S*H' to be auctioned

By JAMIE STENGLE

Associated Press

The combat boots and dog tags that Alan Alda wore as wisecracking surgeon Hawkeye on the beloved television series "M*A*S*H" meant so much to him that when the show ended in 1983, he kept them.

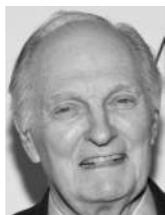

But he's now ready to let the pieces go, in service of another passion: his center dedicated to helping scientists and doctors communicate better. Heritage Auctions is offering up the worn boots and military identification tags on July 28 in Dallas.

Alda, 87, said he wore the boots and dog tags for the 11-season run of the show centering on a Korean War medical unit. Alda's character, Benjamin Franklin "Hawkeye" Pierce, was a talented surgeon who helped ease the stress of working in a war zone with quick quips and practical jokes. When the show ended in 1983 with an episode written and directed by Alda, it attracted the largest U.S. audience for any TV show in history.

The boots and dog tags, given to him by the costume department, "made an impression on me every day that we shot the show," said Alda, who won five Emmys for his work on the sitcom.

Over his long career, Alda has also been a writer and filmmaker, and has worked on Broadway and starred in movies. Currently, he hosts a podcast on communicating called "Clear+Vivid."

"There's an old belief among actors that when you put the shoes of the character on, it's easier to believe you're the character, and I think the boots had that effect on me," Alda said.

Alda

After receiving the dog tags, Alda realized that they didn't carry his character's name, but the names of two men he thought had likely been real soldiers.

"I saw those names every day," he said. "It was an interesting experience

to put them on. I wasn't dealing with props. I was dealing with something that put me in touch with real people."

The dog tags carried the names of Hersie Davenport and Morriss D. Levine. Research conducted by the auction house revealed that both men were discharged from the Army in 1945. According to Heritage Auctions' research, Davenport died in 1970. Levine, whose first name was misspelled on the dog tag with an extra 's,' died in 1973.

Joshua Benesh, Heritage's chief strategy officer, said the boots and dog tags have an "incredible" provenance since they have been with Alda ever since the series ended.

"It was pretty thrilling that what he chose to keep was something that endured with him episode after episode, season after sea-

LM OTERO/AP

Combat boots and dog tags worn by Alan Alda on the beloved television series "M*A*S*H" are up for auction July 28.

son, throughout the entire run of "M*A*S*H," Benesh said.

Alda said that auctioning the items off after all of these decades made sense to him. "I saw this as a chance to put them to work again," he said.

The money raised from the auction will go to the Alan Alda Center for Communicative Science at Stony Brook University in New York, a center he helped start to help scientists and doctors communicate better by applying improvisational exercises and communication strategies.

Alda, who announced in 2018 that he had Parkinson's disease, said he uses some of the same acting skills to deal with the disease's effects. The disease, he said, is "a little like improvisation: It gives you something you didn't expect." But, he said, "if you work on it, you get somewhere."

Taylor Swift adds 14 new European tour dates

Taylor Swift announced Wednesday that she's adding 14 new dates to next year's European leg of The Eras Tour.

The new dates next May include an extra show each in Paris, Stockholm and Lisbon. The following month, Swift will perform an extra show in Lyon, France, before heading to the U.K. for an additional night each in Edinburgh, Liverpool and London. She'll complete the British Isles with an extra night in Dublin, before celebrating the Fourth of July in Amsterdam.

Swift's July 2024 will also feature an additional night in Milan, as well as two in Gelsenkirchen, Germany, about 35 miles northeast of Düsseldorf. In August, she added an extra night in Warsaw and Vienna. She then returns to London to complete the tour with three more nights.

AMERICAN ROUNDUP

Woman rescued after days stuck in swamp, police say

MA EASTON — A Massachusetts woman who went missing last week has been found alive in a swampy area of a state park after hikers heard the woman's cries for help, police said.

Emma Tetewsky, 31, was reported missing on June 26, and police in recent days had appealed to the public for help in finding her.

Officers were called Monday evening to Borderland State Park, about 30 miles south of Boston, after hikers called 911 and reported hearing a woman's screams coming from a swampy area of the park, according to Easton Police investigators.

Police arrived and heard Tetewsky's cries but couldn't see her. Then, three officers waded about 50 feet through the swamp to reach Tetewsky, authorities said.

Investigators said the woman might have been trapped in the swampy area for at least three days.

Tetewsky was taken to a hospital with what investigators described as serious but not life-threatening injuries.

Woman dies after alligator attack near lagoon

SC HILTON HEAD ISLAND — A South Carolina woman died Tuesday after she was attacked by an alligator while walking her dog near a golf course, authorities said.

The 69-year-old woman, who has not been named, was found dead in the Spanish Wells community of Hilton Head Island, the Beaufort County Sheriff's Office said in a news release.

The woman was found at the edge of a lagoon bordering a golf course. An alligator appeared to be guarding the woman, interrupting emergency rescue efforts, the sheriff's office said.

The alligator was safely removed and the woman's body was recovered. An autopsy is pending.

The dog was found safe, said Maj. Angela Viens, a sheriff's office spokesperson.

Plan to demolish house prompts objections

ID BOISE — Objections have been raised to demolishing the house where four University of Idaho students were killed last year, with members of three of the victims' families signaling it should be preserved until after the trial of the man charged in the deaths.

Shanon Gray, an attorney for the family of Kaylee Goncalves, one of the stabbing victims, said the university is disregarding families' requests that the home be left standing until after the trial of Bryan Kohberger, which is set to begin in October, the Idaho Statesman reported.

The bodies of Goncalves, Madison Mogen, Xana Kernodle and

DAMIAN DOVARGANES/AP

An attendee of the Anime Expo, AX, an anime convention held in Los Angeles, rides an electric unicycle, on Tuesday, in downtown Los Angeles.

Ethan Chapin were found Nov. 13 at the rental home across the street from the University of Idaho campus. Kohberger is charged with four counts of murder in connection with their deaths.

The owner of the property donated it to the school after the killings, and the university announced earlier this year that it was planning to demolish the home. University spokesperson Jodi Walker said the school wants the house gone before the start of the fall semester.

Gray also represents the Goncalves and Mogen families in tort claims filed against the university, the city of Moscow and Idaho State Police. That step preserves the families' rights to sue the government entities if they choose in connection with the deaths of their children.

Police: Man missing since 2015 came home next day

TX HOUSTON — A Texas man who went missing as a teenager in 2015 returned home the next day but he and his mother deceived officers by giving false names over the ensuing eight years, police said Thursday.

Houston police detectives said prosecutors have declined to bring false report charges against Janie Santana and her son, Rudolph "Rudy" Farias IV, but that their investigation is continuing.

The announcement came a week after police said they found Farias after receiving a call about a person

lying on the ground in front of a southeast Houston church.

Authorities had not previously said where Farias, now 25, spent the eight years since he was reported missing after taking his two dogs for a walk near his family's home in northeast Houston. He was hospitalized after police found him last week and detectives interviewed him and his mother on Wednesday.

Ex-officer pleads guilty to COVID-19 relief fraud

FL MIAMI — A former South Florida police officer pleaded guilty Monday to stealing about \$285,000 in COVID-19 relief funds.

Former Miami-Dade police officer Samuel Harris, 43, pleaded guilty to wire fraud in Miami federal court, according to court documents. He faces up to 20 years in prison at a sentencing hearing scheduled for Sept. 25.

According to court documents, Harris falsely claimed in a June 2020 Paycheck Protection Program loan application that his business, Oregon Digital Inc., had 10 employees and a monthly payroll of more than \$50,000. Prosecutors said Harris obtained a forgivable loan of \$125,579.

Harris also falsely claimed in a Economic Injury Disaster Loan application submitted to the Small Business Administration that Oregon had annual gross revenues of more than \$859,000 and 10 employees. Prosecutors said Harris

received a \$10,000 advance that did not need to be repaid and \$149,900 in loan proceeds.

The Paycheck Protection Program involves billions of dollars in forgivable small-business loans for Americans struggling because of the COVID-19 pandemic. The money must be used to pay employees, mortgage interest, rent and utilities.

Governor fills high court seat with party chairman

AR LITTLE ROCK — Gov. Sarah Huckabee Sanders on Monday named state Republican Party chairman and former federal prosecutor Cody Hiland to the Arkansas Supreme Court, giving it a conservative majority as justices prepare to take up a challenge to her education overhaul.

Hiland was appointed to fill the vacancy created by the death of Justice Robin Wynne last month and will hold the seat until 2025 when a newly elected justice takes office. Hiland can't run in next year's election for the seat since he was appointed.

The appointment pushes further to the right a court that's been the focus of expensive and heated races in recent years. Arkansas' Supreme Court seats are nonpartisan, but conservative groups have spent heavily over the years trying to flip control of the seven-member court.

Hiland had been nominated as U.S. attorney for the Eastern District of Arkansas by President Do-

nald Trump in 2017 and served in that position through 2020. He is a former state prosecutor and has served as state GOP chairman since December. He also worked on Sanders' campaign for governor as a senior adviser.

Actor out of prison in case tied to cult-like group

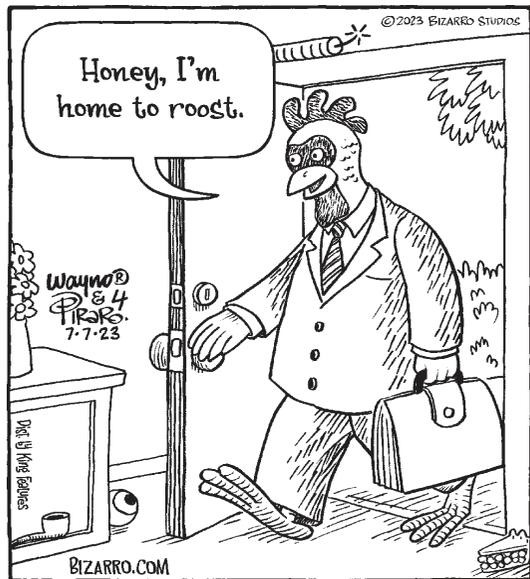

CA DUBLIN — The television actor Allison Mack, who pleaded guilty for her role in a sex-trafficking case tied to the cult-like group NXIVM, has been released from a California prison, according to a government website.

Mack, best known for her role as a young Superman's close friend on "Smallville," was sentenced to three years behind bars in 2021 after pleading guilty two years earlier to charges that she manipulated women into becoming sex slaves for NXIVM leader Keith Raniere.

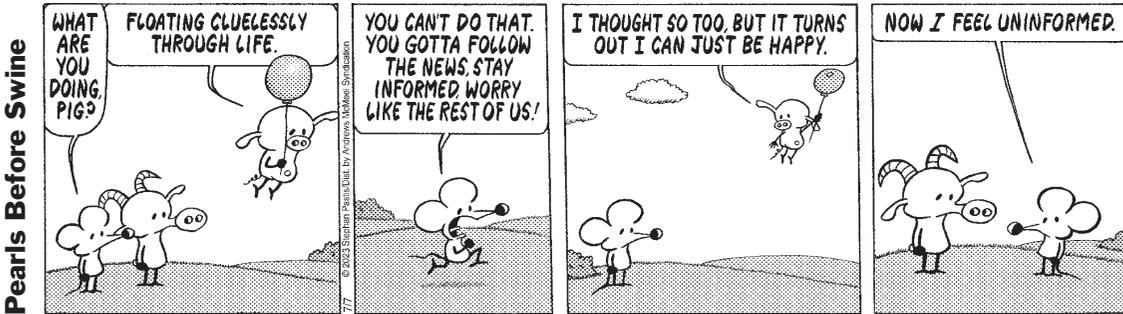

Online records maintained by the Federal Bureau of Prisons said Mack, 40, was released Monday from a federal prison in Dublin, Calif. Her release was first reported by the Albany Times-Union.

Mack avoided a longer prison term by cooperating with federal authorities in their case against Raniere, who was ultimately sentenced to 120 years in prison after being convicted on sex-trafficking charges.

OPINION

The US must wake up to rivalry in the Arctic

By KENNETH R. ROSEN

Special to The Washington Post

As far as U.S. policy goes, the Arctic is synonymous with Alaska. And that's a growing problem. Climate change, military competition and the search for natural resources are turning the frozen north into a hotbed of global rivalry. The United States must start thinking bigger or risk being left behind.

Admittedly, the region is poorly defined, even among scientists and the eight Arctic Council members. Some propose a latitudinal boundary of 66.5 degrees north of the equator; others prefer a topographic boundary (the area to the north of wooded country) or a temperature boundary (median July temperature below 10 degrees Celsius). Based on my conversations with Arctic researchers in seven countries, as well as my travels in the Arctic, the U.S. government and military need a definition that includes far-north allies in a joint commitment to keep the Arctic free and peaceful.

Strategic rivals are moving quickly to dominate the region. Over the past decade, Russia has reopened and modernized upward of 50 Cold War-era bases along the necklace of its Arctic coastline of roughly 15,000 miles. China has invested in liquefied natural gas (LNG) projects in the Russian north. India has also invested in energy and mineral resources in the Arctic as its economy rapidly expands. One researcher who frequents the Arctic aboard U.S. Coast Guard icebreakers for scientific missions expressed shock "we weren't paying more attention" to the region.

An updated National Strategy for the Arctic Region, released by the White House last autumn, was disappointing. Like its prede-

cessor from the Obama era, the strategy lacked concrete steps and actionable plans, while once again painting the Arctic as a remote and peculiar afterthought for the nation, home to poor infrastructure and lacking access to health care. And yet, there are signs of progress that might point the way to an effective, though belated, future strategy. In 2020, the State Department opened a consulate in Nuuk, Greenland; the same year, a U.S. coordinator for the Arctic region was appointed. In the past year, a diplomatic mission in Tromsø, Norway, has opened, and two new positions have been created to focus on the region: an ambassador at large for the Arctic region at the State Department and a deputy assistant secretary of defense for Arctic and global resilience working at the Pentagon. The Northern Warfare Training Center in Alaska prepares twice as many troops than in years past. A \$600 million-plus project will create Alaska's first deep-water port in Nome.

There is much more to be done. "I've been making the case for years on the need to establish greater American presence in the Arctic — vessels, personnel and ports — as America's strategic rivals lay claim to this important region," Sen. Dan Sullivan, R-Alaska, said last year. The United States must also update its northernmost military facility, in Qaanaaq, Greenland, to take account of rising temperatures and thawing permafrost, which are damaging aircraft runways. It's time to expand the U.S. fleet of icebreaker ships instead of relying on other nations' fleets. Ratifying the United Nations Convention on the Law of the Sea would put the United States on equal footing with Russia and other nations staking claims to resources extending to the North Pole.

Further, the United States should shoulder the burden of integrated Arctic defense by filling gaps in surveillance, specifically in the North Atlantic between Greenland and Iceland and the United Kingdom. U.S. drones can keep an eye on remote arctic regions, while imagery from surveillance satellites is more widely shared with Arctic allies, rather than relying on infrastructure and equipment owned and operated by those allies who are already turning their defense strategies homeward. American forces should participate more regularly in NATO Arctic exercises. (American B-1 bombers and F-35s joined an exercise in the Nordic region for the first time in June.) The long-running dispute between the United States and Canada over the boundary of the Beaufort Sea — north of Alaska and Yukon — should be resolved in a display of good faith to enhance cooperation with Canada (another state whose Arctic policy is turning more inward) in modernizing the NORAD network of air defense systems. Such steps would illustrate a previously unseen U.S. commitment to being a cooperative, not passive, regional partner while expanding the vision of a more global Arctic.

Competition among great powers cannot be avoided, but it can be ignored. Despite the actions of our rivals, Washington has made only modest efforts to increase its Arctic footprint, both in Alaska and beyond. A longer and wider vision is required to meet overt and covert threats. That starts with the United States coming to understand that the Arctic is not just Alaska plus ice; it reaches across the northern flank and is a key to national security, global stability and climate resilience.

Kenneth R. Rosen is a journalist who is writing a book about a new cold war in the Arctic.

Why blocking student loan plan is healthy for politics

By JONAH GOLDBERG

Tribune Content Agency

Last week, the Supreme Court scuttled the Biden administration's attempt to forgive more than \$400 billion in student loan debt.

As a matter of policy, broad-based student debt cancellation remains a terrible idea for a host of reasons.

While targeting relatively small debts held by lower income community college graduates is more defensible, sweeping student debt forgiveness is regressive, rewarding people with an asset—a college or graduate degree—who are better equipped to pay it off than other debt-burdened Americans. At a time when the government is still fighting inflation, it was "reckless"—in the words of Obama administration chief economist Jason Furman—to pump billions into the economy.

Finally, it's counterproductive on its own terms. The debt payment moratorium, implemented by the Trump administration and extended by President Joe Biden, has led to more borrowing. According to a University of Chicago study summarized in The Economist, "the pause in student-loan payments caused borrowers to rack up more debt, not less."

But if Democrats want to ignore economic reality and reward a key constituency by having other people pay their debts, they're free to do so. There's just one hitch. Congress needs to do it.

In 2021, Biden questioned how much authority he had to cancel student debt "by signing with a pen" and then-House Speaker Nan-

cy Pelosi said he didn't have the authority to do that. But under intense pressure from the left of their party, they reversed course. They discovered a ridiculous pretense under the 2003 HEROES Act and reversed the Department of Education's standing opinion.

Fortunately, the Supreme Court upheld the constitutional separation of powers. Congress, not the president, has the power of the purse.

"If my fellow citizens want to go to Hell," Supreme Court Justice Oliver Wendell Holmes Jr., famously said, "I will help them. It's my job."

Holmes' reputation as a philosopher-jurist and civil libertarian has long been in need of a sharp revision. Holmes was a majoritarian, and because he was a jurist during the Progressive Era, his judicial restraint—a refusal to strike down government actions during a time of government expansion—was admired by those seeking to expand the government. But Holmes had a point. It's not the Supreme Court's job to stop politicians and the voters who elected them from making bad decisions so long as they don't violate the Constitution in the process.

The problem is that after decades of the judicial and executive branches doing Congress' job—often at the behest of a dysfunctional Congress unwilling or unable to live up to its responsibilities—judicial restraint is now seen as judicial activism. The court didn't rule that student debt can't be forgiven; it merely said that government has to do it right or don't do it at all.

Whatever you think is the right policy on student debt, I think this is very good news for our politics. The accumulation of power in the presidency has fueled polarization by making presidential elections look like parliamentary elections in which new presidents have sweeping authority to do whatever they want. But our constitutional order is not designed for these kinds of zero-sum politics. The presidency is not equipped to legislate.

Executive orders can be reversed by the next executive. Because the bases of both parties don't know or care about how policy ends are achieved, every new administration swings for the fences, trying to do as much as it can get away with, to the cheers of their partisans in Congress and media. And they're soon swept from power as a result.

Hence the great paradox of American politics today: You can get what you want if you win more elections, but to win more elections you need to ask for less.

This cycle of overreach and correction was made possible by a Supreme Court that has long turned a blind eye to the separation of powers.

The shift toward better politics may have already begun. On Monday, Vice President Kamala Harris told NPR, "Look, we have three branches of government. The court took rights from the people of America. Congress can put those rights back in place. We cannot through executive action. Congress can."

Jonah Goldberg is editor-in-chief of The Dispatch and the host of The Remnant podcast.

Grant Williams, left, is going from the Celtics to the Mavericks as part of a three-team trade.

Source: Mavs get Williams

BY SCHUYLER DIXON
 Associated Press

The Dallas Mavericks are acquiring Grant Williams from Boston in a sign-and-trade deal that includes the San Antonio Spurs, a person with knowledge of the agreement said Wednesday night.

Dallas is sending guard Reggie Bullock and a 2030 pick swap to the Spurs, while the Mavericks and Celtics will receive multiple second-round picks, according to a person who spoke to The Associated Press on condition of anonymity because no trades could be finalized before Thursday.

Williams' contract is for \$54 million over four years.

The Mavericks made it clear they thought their roster needed work after missing the playoffs when the pairing of Luka Doncic and Kyrie Irving faltered in the two months after the blockbuster deal that brought Irving from Brooklyn in February.

Irving and the Mavs have agreed on a \$126 million, three-year contract that should become official when free-agent deals can be signed. Center Dwight Powell also is set to return.

The 6-foot-6 Williams will change the look of the Dallas frontcourt with the lanky, offensive-minded Christian Wood not expected to return. The 24-year-old averaged career highs of 8.1 points and 4.6 rebounds in his fourth season with the Celtics.

Dallas wants to rediscover the defensive mentality that helped fuel a run to the Western Conference finals in 2022. But it will have to be with a new set of key defensive pieces. The departure of Bullock comes after Dorian Finney-Smith went to the Nets in the Irving deal.

TRACK & FIELD/MLB

ASHLEY LANDIS/AP

Anna Hall wins a heat in the women's heptathlon 200-meter run at the World Athletics Championships on last July in Eugene, Ore. Hall's energetic nature has made her a standout star in track and field.

Spirited Hall has world title on mind, record in sights

By PAT GRAHAM
Associated Press

Heptathlete Anna Hall isn't one to hold back her emotions. Those grimaces or dances reveal her precise thoughts about a particular jump, throw or run.

She's an open book, too — with her journal. The reigning world bronze medalist encourages her coaches to scan her entries for insight into her workout mindset. (The doodles happen to be a nice bonus.)

The fun-loving, candy-chomping 22-year-old from Colorado who labels herself a “big goofball” is emerging as the next big name in track and field. She might even be the one to break Jackie Joyner-Kersey's nearly 35-year-old world heptathlon record.

“What I see are all the tools to rewrite the record books,” Joyner-Kersey said in a phone interview on the eve of the U.S. championships that start Thursday at Hayward Field in Eugene, Ore. “You're seeing greatness in motion without even knowing the greatness is before you, because of her natural ability. When you see Anna compete, she competes with joy.”

She may even have with her a package of Nerds Gummy Clusters, her candy of choice for an energy boost in between the seven events spread over two days of competition. She will for sure be clowning around with her coaches, family, fans in the stands and her

competitors.

Just Hall being Hall.

“I feel like the way that I compete in a multi-event is a little bit unorthodox,” said Hall, whose pre-competition routine includes drinking grape juice for good luck. “I'm bouncing around between every event and dancing. I'm trying to be loose and just trying to enjoy it.”

Each season, Hall scribbles goals on sticky notes and posts them all over her mirror. That way, they're constantly seen.

Last year, one of her goals was earning a podium spot at the world championships in Eugene. She did just that by taking home a bronze medal in the event won by Belgium's Nafissatou Thiam.

About this season's sticky-note goals on her mirror: “Top secret,” she said.

But they're not too hard to decipher. Make the U.S. team for worlds — the top three earn spots — and she would be among the favorites next month in Budapest, Hungary. An American woman hasn't won the heptathlon title at worlds since Joyner-Kersey in 1993.

And yes, Joyner-Kersey's world record is very much on Hall's mind. Joyner-Kersey set the mark of 7,291 points in taking home gold at the 1988 Seoul Olympics. It's a performance Hall has watched over and over again.

Really, though, that's a quest for down the road. Hall's concentration is simply on her events Thurs-

day, which include 100 hurdles, high jump, shot put and the 200. Day 2 on Friday is the long jump, javelin and finally the 800, which is simultaneously her favorite and least favorite event.

“It's not so much about chasing a giant score,” Hall explained. “We're just using this as a stepping stone so we can get right back to training for worlds.”

Hall's in peak form, recording a career-best score of 6,988 points on May 28 in Götzis, Austria. That performance moved her to No. 5 on the women's all-time world list.

That performance was also enough to convince her team to put her plans for the 400-meter hurdles on hold, an event she was hoping to run at nationals.

“I love the hurdles but my coaches ultimately decided that we have a real shot at winning (at worlds),” explained Hall, whose father, David, was a quarterback at Michigan along with playing basketball and being a decathlete. “So it would be taking that for granted to not put all of our eggs in that basket and go for that.”

In the stadium at worlds was Joyner-Kersey, who's gotten the chance to know Hall and her family. She believes gold is in Hall's future.

That world record, too.

“I've watched many multi-eventers over the years. But I have not seen one like Anna,” Joyner-Kersey said. “There's no give-up in her. She reminds me of myself.”

Reds enjoy winning behind De La Cruz

By STEPHEN WHYNO
Associated Press

WASHINGTON — Elly De La Cruz walked through the clubhouse wearing a shirt with his face and nickname, “La Cocoa,” on it. Sitting at his locker facing the rest of the room, Joey Votto joked to a nearby coach that he should let the kids play.

The kids are playing, all right, and the Cincinnati Reds are winning as a result.

Sparked by De La Cruz, the rookie sensation whose major league debut last month coincided with Cincinnati's season turning around, the Reds are rolling toward the All-Star break playing some of the best baseball in quite some time for the storied franchise. They're atop the NL Central and on pace to make the playoffs for just the second time in a decade, with a team full of young players who are having plenty of fun along the way.

“We have very good vibes going on,” De La Cruz said through an interpreter. “It feels like everyone's united and everyone's just trying to help each other out.”

It's working. The Reds are 20-6 since De La Cruz joined them on June 6.

The 6-foot-5, 200-pound dreadlocked 21-year-old from the Dominican Republic has brought smiles in the dugout and production on the field. Through his first 25 games, he is batting .308 and has driven in 13 runs, launched three home runs, stolen 10 bases and became Cincinnati's first player to hit for the cycle since 1989.

“Elly's playing great since he's been here, and that's helped us a lot,” said David Bell, now in his fourth season as Reds manager. “We've definitely played well since Elly's been here.”

It also helps that Votto, the 2010

NL MVP and longtime face of the franchise, returned on June 19 after missing the previous 10 months while recovering from surgery to repair his left biceps and rotator cuff. Now 39, Votto is feeling the best he has in well over a year.

He has had a tough time containing his joy.

“I've got a dirty little secret: I actually can't stand baseball, so every day is a nightmare for me,” Votto deadpanned earlier this week after hitting a home run to snap a 0-for-21 slump in yet another win.

“I've been having a great time. Guys are young, energized, motivated. Winning, of course, but it has a lot to do with the personalities in the clubhouse. These guys are silly and talented and getting better.”

Votto, who turns 40 in September, is by far Cincinnati's oldest player. De La Cruz is the youngest — one of 21 players on the 26-man roster who hadn't been born yet the last time the organization won the World Series in 1990.

Shortstop Matt McLain is 23, first-time All-Star closer Alexis Diaz and second baseman Jonathan India are 26 and center fielder TJ Friedl is 27. The mix has worked well.

“We're just having fun together, playing the game we love, playing with heart, playing with passion — that's our mentality,” India said Tuesday after a third consecutive victory. “We just care about winning. We have one goal in mind: to make it to the end and win the ring.”

The Reds haven't won a playoff series since 1995. Getting to and through October is now their goal.

“It's really been a fun time so far,” Votto said. “And I think the good times are actually ahead of us.”

PATRICK SEMANSKY/AP

The Cincinnati Reds' Nick Senzel, right, celebrates with teammate Elly De La Cruz after driving in De La Cruz with a three-run home run against the Nationals on Tuesday in Washington.

Pitch clock may equal better defense

By STEVE MEGARGEE
Associated Press

MILWAUKEE—The pitch clock may be bothering players as they step to the plate, but they like it a whole lot better once they put on their gloves and take the field.

While the rules changes put in place this year to speed up the pace of play have garnered plenty of attention for how they've affected hitters and pitchers, some players and managers have said the new guidelines are also positively impacting defense.

The pitch clock in particular—an idea meant to make it easier for fans to stay focused on the field—may be keeping fielders locked in, too.

“I think it’s helping defensively a lot, just because you don’t have the down time to really kind of walk around,” said Seattle Mariners second baseman Kolten Wong, a two-time Gold Glove winner. “You’re not cleaning dirt, you’re constantly back and forth, back and forth, back and forth. So, I’m a big fan of it.”

The pitch clock adopted this year—along with limits on infield shifts and several other rules—gives pitchers 15 seconds between deliveries if there are no baserunners and 20 seconds with someone aboard.

There’s no doubt that games are faster. The average game length of 2 hours, 40 minutes is the shortest since 1984. Games had lasted an average of at least 3 hours every year from 2012-22.

That change was expected. But some players and coaches said they’ve been pleasantly surprised by how it’s changed things on defense.

Milwaukee manager Craig Counsell, asked this season about left fielder Christian Yelich’s improving glove work, landed on the clock as a key contributor. After ranking

EMIL T. LIPPE/AP

The pitch clock ticks down in the top of the ninth between the Texas Rangers and Philadelphia Phillies in Arlington, Texas, on April 2. Some players and coaches feel the clock has helped defenders stay focused.

among the bottom 10 left fielders last year with minus-5 Outs Above Average, Yelich is third this season with 3 OAA, per Baseball Savant.

“It’s definitely not something I’d thought of, but I think it’s easier to play defense now the way the game is structured because it’s just faster-paced,” Counsell said. “That’s best for defenders. I don’t think hitters like it still, to be honest with you. And pitchers don’t like it. But I think it’s great for defenders.”

Counsell said the lengthy delays between pitches in previous seasons could make it tough for fielders to maintain their focus.

“It’s still your job, but (the slow pace) was making it really hard, I think especially for outfielders,” Counsell said.

Arizona Diamondbacks first ba-

seman Christian Walker indicated it was an issue for infielders as well.

“When you’ve been standing out there for 15-20 minutes and you get a ground ball hit at you, I know that’s been a challenge in the past, in long innings, staying locked in,” Walker said.

It’s hard to find empirical evidence to support or dispute the theory. The league-wide fielding percentage of .986 through Tuesday’s games is the highest in the sport’s history, but that may not be the best indicator. Fielding percentages have been rising steadily for decades thanks in part to improved field conditions and equipment, and last year’s fielding percentage was .985. The metric also relies on subjective decisions by official scorers and doesn’t factor for a player’s range.

It’s also hard to pull trends from advanced defensive metrics because of the limits placed on infield shifts between the 2022 and ’23 seasons.

That leaves it up to the notoriously unreliable eye test to determine whether there’s any difference.

“I don’t think I’ve necessarily noticed that,” New York Yankees manager Aaron Boone said. “My gut, or hearing you ask that question and knowing myself as a fielder, I would think it’s a good thing. You know, being able to keep it moving. I know we always liked a pitcher that worked fast, right? It felt like you were more on your toes, more alert. So I would think there’s something to that, but it’s not necessarily something that I’ve taken away from it so far.”

Robert, Alonso lead Home Run Derby field

Associated Press

CHICAGO — Chicago White Sox All-Star Luis Robert Jr. and two-time champion Pete Alonso of the New York Mets are set to participate in baseball’s Home Run Derby in Seattle on Monday.

Robert earned the top seed in an eight-player field announced Wednesday that includes Seattle’s Julio Rodríguez, 2018 American League MVP Mookie Betts, Toronto’s Vladimir Guerrero Jr., Tampa Bay’s Randy Arozarena, Texas’ Adolis García and Baltimore’s Adley Rutschman. Alonso, who won in 2019 and 2021, will try to join Ken Griffey Jr. (1994, 1998 and 1999) as the only three-time champions.

Robert will go against the eighth-seeded Rutschman (11 home runs) in the first round, with second seed Alonso facing the seventh-seeded Rodríguez

MATT MARTON/AP

The White Sox’s Luis Robert Jr. hits a three-run home run against the Toronto Blue Jays during the sixth inning Tuesday in Chicago.

(13). Third-seeded Betts (23) meets six seed Guerrero Jr. (13), and fourth-seeded García (21) faces five seed Arozarena (16).

The seeding was determined by home run totals through Tuesday. Tiebreakers went to the player with the most homers

since June 15.

“I’m pretty sure I’m going to feel very happy during those two days,” Robert said. “It’s going to be very special for me.”

Robert posted on Instagram hours before the official announcement that he would participate in the Home Run Derby. The Cuban outfielder was also selected to his first All-Star team.

“If he’s happy about it, I’m happy about it,” manager Pedro Grifol said. “It’s a great experience. I remember Salvy (Salvador Perez) doing it over there in Kansas City. He was pretty pumped about it, and he had a really good time.”

Robert and countrymen Arozarena and García are participating for the first time. They will try to join two-time champion Yoenis Céspedes as the only Cuba natives to win the Derby.

WIMBLEDON

All England Club trying to blend past, present

BY HOWARD FENDRICH

Associated Press

WIMBLEDON, England — Tennis fans in New York can gather to see live TV coverage of the last three days of Wimbledon at an outdoor watch party at Brooklyn Bridge Park from July 14-16, featuring the women's final and the men's semifinals and final. Online registration for 1,500 free tickets for each day ends Thursday; walk-ins will be allowed, too.

So much of that paragraph would have been incomprehensible to anyone around for the initial edition of the oldest Grand Slam tennis tournament in 1877, from the television broadcast to the trans-Atlantic appeal to the online element to, even, the participation of women in the competition: They were not allowed to play singles until 1884 or doubles until 1913.

The creation of "The Hill in New York" — touted as "a quintessential Wimbledon experience from afar," replete with gin and tonics, strawberries and cream, fish and chips, tea and scones and, naturally, a merchandise shop with the same towels, hats and other official tournament paraphernalia sold at the actual competition site — is one of many ways in which the All England Club (full name: All England Lawn Tennis & Croquet Club) is setting one foot in the modern age, such as the retractable roofs on Centre Court and No. 1 Court that permitted play as rain fell Tuesday and Wednesday, while keeping another solidly rooted in its famous past.

"At Wimbledon, we're always conscious of finding the balance between respecting our heritage and tradition," Club chief executive Sally Bolton said, "alongside the pursuit of innovation and bringing in new audiences to share in the magic of The Championships."

See? Even the way they refer to the two-week event by those two words is a nod to earlier times. As is the continued use of grass courts, the only major tournament to still do so (the U.S. Open and Australian Open have shifted from grass to hard courts; the French Open is played on red clay.) As is the use of "fortnight" to describe the two weeks.

And yet the fact that it is now a fully 14-day event is a nod to today. Until last year, Wimbledon's schedule was spread over 13 days; the middle Sunday was set aside as a day of rest, used for play only in cases of extreme rain delays during Week 1 to make up a backlog of contests. Now those Sundays

ALASTAIR GRANT/AP

Victoria Azarenka plays during her first-round match on Monday at Wimbledon. One tweak this year was to the all-white clothing rule, which is often cited as part of Wimbledon's historic charm but also was criticized by some female players.

will always have matches.

That, like the New York event that began in 2022, is just one of the ways in which the All England Club is adapting to the present — and has its eyes on the future.

"We recognize that we're a global event and we have audiences all over the world," Bolton said in an interview. "But as we think about growth, there are certain countries where we think that there's quite a bit more potential to grow that audience, and the U.S. is a great example of that."

There is also the intent to expand the local footprint by using land from the golf club across the road to build a new arena and courts for qualifying rounds. Bolton said the hope is there will be a decision by local authorities on a planning application by the end of 2023, so work can begin to allow new courts to be ready in the late 2020s or early 2030s.

Gender equity has been a particular area of change.

One tweak this year was to the all-white clothing rule, which often is cited as part of Wimbledon's historic charm but also was criticized by some female players for making them uncomfortable when they have their period. Now they are allowed to wear dark-colored undershorts.

"That was very much about rec-

ognizing that we want all athletes to have the best opportunity to focus on their performance," Bolton said, "and to not have distractions. ... It wasn't a difficult decision."

Victoria Azarenka, a 33-year-old from Belarus who was twice the champion at the Australian Open and twice a semifinalist at the All England Club, appreciated the move.

"England is based a lot on tradition, and I think they try to hold on to it as much as possible, compared to other places. That's what differentiates Wimbledon," Azarenka said. "But the adjustment to the attire is more practical than sticking with the tradition, and it is the right step to help women feel a little more comfortable here. The rest of the white attire is something that makes Wimbledon special and a beautiful part of that. Tennis, in general, can use a bit of a change in rules."

There are other ways in which Wimbledon has been doing that — albeit after taking longer than some wished.

In 2007, Wimbledon became the last of the four tennis majors to pay its women's singles champion the same amount as its men's singles champion. In 2019, Wimbledon chair umpires stopped referring to female players with "Miss" — or "Mrs." for married women —

ALBERTO PEZZALI/AP

Andy Murray plays under a closed roof during his first-round match on Tuesday at Wimbledon. One of the ways the All England Club is adapting is by putting retractable roofs on two courts.

when announcing the winner of a game, a set or a match, and switched to saying only their last names, the way long done for men.

Last year, female champions were listed on the honor boards in a Centre Court hallway simply by their first initial and last name — the way the men's title winners always have been — instead of preceded by "Miss" or "Mrs." Until then, the entry for Chris Evert's 1981 championship, for example, showed her name as "Mrs. J.M. Lloyd," because she was married at the time to John Lloyd. For her titles in 1974 and 1976, before that marriage, she was listed as "Miss C.M. Evert."

"Wimbledon, and all of the Grand Slams, are taking gender equity very seriously. There are different stages, and they still have different opinions and approaches to the subject. ... It maybe isn't happening as fast as everyone would like to see in every place. But I think there are genuine efforts and I think they should be recognized for the efforts that are being made. And I think they're being made for the right reasons," said Steve Simon, the head of the WTA, the women's pro tennis tour. "They're being made because they think it's right and they need to make these changes versus being forced into it. Because that's the way you ultimately want it to happen."

Bolton herself represents that sort of "very visible shift," as she termed it.

She is the first female chief executive at the Club since the position was established 40 years ago. Denise Parnell has been appointed tournament referee as of next year, the first woman to hold that job in Wimbledon history. Another woman, Deborah Jevans, will take over as vice chairman of the Club after the current tournament ends.

"In many ways, it's by accident that we've ended up with three women in those roles at the same time," Bolton said, "but I think it is a reflection of the way in which the club is evolving and changing."

Marketa Vondrousova, Czech Republic, def. Veronika Kudermetova (12), Russia, 6-3, 6-3.

WOMEN'S WORLD CUP

Aussie rules reject Kerr now Aussie face of Cup

By JOHN PYE
Associated Press

BRISBANE, Australia — When Sam Kerr was told she could no longer play for her chosen Australian rules team, she went searching for another kind of football.

A preteen reject from the home-grown game — because she wasn't allowed to play with the boys anymore — Kerr has become one of Australia's most recognizable athletes, and is the face of the first Women's World Cup in the Southern Hemisphere.

She's already on the cover of FIFA 23 and shares the top rating in the update released in time for the tournament in Australia and New Zealand.

Her somersaulting goal celebrations have become synonymous with the growth of women's soccer in Australia, where she's the country's all-time leading scorer in international soccer, and in the England-based Women's Super League, where she's a star for Chelsea's title-winning team in the league and FA Cup.

She saves the backflip mainly for the big occasions, and she's refined it since scoring her first international goal in 2010 against South Korea, when the execution wasn't quite as polished.

The fitter, faster and more experienced Kerr has incredible balance and poise at pace. She can launch powerful strikes from distance or use her deft touch and reflexes from close. She's strong in

the air and her headers make her a major threat in front of the net.

Kerr describes herself as an instinctual player: "I just play what I see, or play what I feel. And I think it's always evolving."

This will be Kerr's fourth World Cup, but by far her most important. A rare miss in a penalty shootout loss to Norway in the round of 16 in 2019 has given Kerr added motivation.

"I love being in a (place) where one or two moments can change the path, your career really," she said at Australia's squad announcement. "And I think this World Cup is one of those moments."

The 29-year-old striker wants to leave a legacy for younger players and strives for what Australians collectively know as a Cathy Freeman moment.

Freeman lit the cauldron to open the Sydney Olympics in 2000 and, carrying the full expectations of the host nation, went out the next week and won gold in the 400.

"I was only 7 years old and I understood," said Kerr, who watched on TV. "She walked into that stadium and every single person stopped to watch her."

When she leads the Matildas out for their Group B opener against Ireland on July 20, at the same stadium where Freeman triumphed, there'll be 80,000 in the venue and millions more Australians watching with great expectations.

The Matildas haven't pro-

gressed past the quarterfinals in seven previous trips to the World Cup but public hopes here are soaring.

"It would be the ultimate dream," Kerr said. "That's why I do what I do every day. That's why I sacrifice so much — to win a World Cup."

Moya Dodd, who played for the Matildas in the 1980s and 90s and later became one of the most influential women in world soccer as a member of FIFA's executive committee, said Kerr "was always good, but she's gone from good to lethal."

"If you asked anyone on the street to name an Australian footballer right now, they'd say Sam," Dodd added, highlighting the rising profile of the national women's team. "Ten years ago that would have been a stretch of the imagination."

Kerr's mother, Roxanne, said it might have been different if the local Aussie rules competition in Perth allowed girls to play in mixed teams with boys beyond the age of 12. Daniel Kerr, Sam's older brother, had a long professional career with West Coast Eagles in the Australian Football League. Her father, Roger, also played at an elite level.

When that career path appeared to close, the family convinced a 12-year-old Sam to give soccer a shot and it wasn't too long before a talent scout saw her play and invited her to practice with a

RICK RYCROFT/AP

Australia's Sam Kerr, left, picked up soccer only because she was told she could no longer play for her chosen Australian rules team. She has been a star at big clubs in the U.S. and Britain.

state representative team.

After politely declining the offer initially, Kerr changed her mind and her career took off at an astonishing pace — making her international debut for Australia as a 15-year-old winger with enormous potential.

Kerr has been a star at big clubs in the U.S. and Britain, has accumulated 120 international caps heading into the World Cup and, as captain and inspirational leader, represents the here and now of the Matildas.

Tom Sermanni, who was Matil-

das coach in Kerr's early days, described her as "just fearless."

"She encapsulates the Australian spirit — she's a fierce competitor but she looks like she's enjoying herself."

If there's laughing or mucking around, Kerr agreed, "I'm normally right in the middle."

But she's always alert at the business end.

As Kerr's longtime Matildas teammate, Arsenal forward Caitlin Foord, said: "She can do it all. We know we just have to find her in the box."

Pink hair and lethal left foot make Endo fan favorite

By STEPHEN WADE
Associated Press

TOKYO — Jun Endo grabs the attention right away.

First, it's the Japan winger's pink hair. Next, her quick moves, agility and the curling left-foot crosses. These have made her a fan favorite at California club Angel City FC.

Look for her to get similar attention when Japan opens in the Women's World Cup in Group C against Zambia. Spain and Costa Rica are also in the New Zealand-based group.

"She creates an expectation that something will happen when she has the ball," Japan coach Futoshi Ikeda told The Associated Press. "She is a player who is trying new things in search of her own development in the league in the United States."

Endo played on Japan's 2019 World Cup team, which was knocked out in the round of 16; a disappointment for a country that won the 2011 Women's World Cup

ASHLEY LANDIS/AP

Japan's Jun Endo will draw a lot of attention at the Women's World Cup more for her play on the field than her pink hair.

and was the runner-up in 2015.

In an interview with the AP, Endo described herself as "rookie" on that 2019 team.

"I picked up some minutes but I really didn't show as well as I wished," she said. "This time I feel I have to show more of the experience I have gained over four years. I want to be an example to

the younger players."

Endo said she has learned to express herself — on and off the field — playing two seasons with Angel City. She played previously in Japan's new WE League. She said it's more difficult to stick out in Japan, which often values conformity over creativity.

She may have been referring to an expression in Japanese that sums up the issue.

"Deru kugi wa utareru." Roughly translated, it means the nail that sticks up gets hammered down.

"When I came to Los Angeles and started looking, walking on the streets, I saw that freedom to be yourself without being looked at," Endo said. "Japanese society on the whole is not like that. That doesn't mean I disrespect anybody in a different culture, but I love expressing myself."

The hair and her untiring style of play turned her into a near-celebrity player in Los Angeles, which she said she didn't intend or foresee. The hair she said was

more of a fashion statement, but it transitioned to the soccer field.

"I simply like making changes and having fun. I'm into fashion, hairstyle," the 23-year-old Endo said. "I didn't think of myself when I arrived at Angel City as the Energizer-Bunny kind of player. But now I'm often told I play like I'm having fun, and I'm enjoying it."

"Compared with how I played in Japan, I am enjoying it more. But there is also something about becoming more mature and thinking how I can support my teammates as a leader."

Endo was a hit from the start. In Angel City's first game — a 2-1 victory over the North Carolina Courage — she had an assist and a goal.

Her only setback has been an injured left knee, which she said is almost back to full strength.

Endo's childhood was marred by upheaval. She grew up in northeastern Fukushima prefecture. She was a child in 2011 when a magnitude 9.0 earthquake, tsuna-

mi, and the meltdown of three nuclear reactors took the lives of thousands.

Her family lived inland and the impact was not as great, but she has said in interviews that she was not allowed to go outside for a year.

Endo repeated several times her growing confidence to express herself on the field. To take a chance, which she suggested Japan's women will have to do to compete. The Japanese are famous for their ball skills, but she said the team might need more aggression despite often being smaller than the opposition.

"Individual players have to pick up the intensity, have that added hunger to score goals or to win that 50-50 ball," she said. "Japan is slightly lacking that."

"Compared to Japanese in general, other players in other countries tend to take their chance and take a big swing at it. Not being afraid to take a shot or take a chance. Japan will need that."

WOMEN'S WORLD CUP

Putellas back in nick of time

Spain's goal scorer returns from injury

By JOSEPH WILSON
Associated Press

BARCELONA, Spain — Alexia Putellas heads to the Women's World Cup after winning back-to-back Ballon d'Or awards and helping Barcelona win two of the last three Champions League titles.

Even so, her role on Spain's national team is in doubt. The 29-year-old midfielder with a knack for scoring has barely played for her club since recently returning from a leg injury that sidelined her for nearly 10 months.

Alexia was included on Spain's squad for the tournament beginning later this month in Australia and New Zealand. But it is not clear what part she will play on a team that has made huge strides in recent years. Alexia, who leads Spain with 100 appearances, has had a role in that boom by becoming only the second Spaniard, woman or man, to win the Ballon d'Or.

She was set to take the 2022 European Championship by storm, only for the anterior cruciate ligament in her left knee to rupture days before the tournament. She played her first game since that

injury in late April when Barcelona clinched the Spanish league title.

In total, she has made six appearances since her injury, all as a substitute, including in the Champions League final. She lifted the trophy as Barcelona's captain after her teammates pulled off a 3-2 comeback victory over Wolfsburg.

Spain coach Jorge Vilda praised Alexia when he announced his preliminary squad. But it was unclear if he thought he would get more from her playing as a starter or as a backup who could handle the pressure of the final minutes.

Alexia guided Barcelona to its first European Cup in 2021. The next season she led the Champions League in scoring with 11 goals but Barcelona lost in the final. This season, she was an observer until the final minutes of her club's triumphant Champions League campaign. If fully recovered, Alexia would be a formidable weapon for Spain thanks to her ability to join the attack, find spaces to shoot, and her superb strike from distance.

"We know that she is going to help us a lot, not just on the field, but also with her leadership and the respect she commands from the other players, her experience, her ability to know what is needed, and that talent she has to rise to

MARTIN MEISSNER/AP

FC Barcelona's Alexia Putellas attends a training session in Eindhoven, Netherlands, on June 2 ahead of the Women's Champions League final against VfL Wolfsburg. Putellas is on Spain's World Cup squad.

the challenge," Vilda said. "That is what we were missing in the last European Championship."

But Alexia is also returning to a team that has undergone an unwanted overhaul.

Relations deteriorated between several players and Vilda after Spain exited last year's European Championship in the quarterfinals. Fifteen players, including several Barcelona teammates of Alexia, said they would not continue to play for Vilda unless he improved his coaching methodology.

The federation interpreted the players' decision as an attempt to force the ousting of Vilda. The federation backed the coach firmly and left the rebels off the team.

Now, three of the 15, including

Barcelona playmaker Aitana Bonmati, have been included after a behind-the-scenes reconciliation with Vilda.

The 12 still left off the squad include Patricia Guijarro, who scored twice in Barcelona's win over Wolfsburg.

Alexia was injured at the time of the split between the players and coach and was not among the 15 who refused to continue playing. She did show support for them in a message posted on social media. That, however, did not impede her return for Spain once she had healed.

Spain opens the World Cup against Costa Rica in Wellington on July 21. Japan and Zambia are also in Group C.

Alexia may also have to deal with off-field distractions — this time from her club.

Spanish radio Cadena SER recently reported that Barcelona would consider selling Alexia if they had a strong offer. Alexia, who is from a town near Barcelona and has one more year on her current deal, reportedly has no interest in leaving. The indebted club is burdened by a massive payroll for its men's team and is expected to try to shed some male players.

Barcelona told The Associated Press that it is in negotiations with Alexia to give her another contract and has no desire for her to leave. The club also said it has no plans to trim the budget for its women's team.

Dual: Trade to San Diego has revitalized Morgan's pro career

FROM PAGE 32

Having just turned 34, Morgan is busier than ever. She's adeptly juggling motherhood with pursuing another World Cup title while helping make the Wave a popular draw. She started a foundation to help girls and women on and off the field and is active around town, whether it's throwing out a ceremonial first pitch at a San Diego Padres game or helping to open a soccer store she's an investor in. She also helped lead the successful fight against the American governing body for equal pay and prize money.

Morgan, who is from the San Gabriel Valley east of Los Angeles, was traded from Orlando to the expansion Wave in December 2021. She was reunited with Wave President Jill Ellis, who coached the United States to World Cup titles in 2015 and 2019. Morgan was a fixture on both teams.

Morgan has helped elevate soc-

JULIO CORTEZ/AP

Forward Alex Morgan holds her daughter, Charlie, during an event with the U.S. women's national team. Morgan says she feels calmer heading into this World Cup and wants to represent mom athletes.

cer's popularity in San Diego as the Wave's marquee attraction. The Wave play at San Diego State's year-old 35,000-seat Snapdragon Stadium and set National Women's Soccer League attendance records of 30,854 for a home

opener, on March 25, and 26,215 for a playoff game last fall.

Sean Dreusike, 41, who is the spirit coordinator for the supporter group The Sirens, said Morgan has been his favorite player since she was an emerging star and

scored a key goal in qualifying for the 2011 World Cup. He'll travel to New Zealand to watch the Americans in this World Cup.

Dreusike said he was "stunned" when Morgan ended up in San Diego. He figured she'd play in LA, where her husband had played for the Galaxy.

"In Orlando, she was struggling there, and she came here and I was worried it might be like a little bit of a retirement home; you know, famous player, in San Diego, that whole thing," Dreusike said. "But she's been fantastic and in lot of ways is the heart and soul of the team."

Coach Casey Stoney called Morgan "an ultimate pro" and said she's more than just the focal point of the Wave's attack.

"As a player, as a leader, she's been huge," Stoney said. "As an ambassador in the community and what she gives back, even bigger. You know, people come to

most games to see her, to watch her, to meet her, and she's an incredible role model. We're very lucky as a club that we have her."

Morgan and Padres right-hander Joe Musgrove, a San Diego-area native, share a marketing representative. Wave and Padres players supported each other's playoff runs last fall.

"All the things that she's accomplished in the game of soccer alone has been a huge motivator for a lot of young girls," Musgrove said. "Obviously she has played at much more competitive and like crazier levels, but to come here and be that staple for those girls and give the community of San Diego a female figure to be a hero and follow, is awesome."

Said Morgan: "Well, bottom line is, I love this city. This is my city far after soccer as well. Just coming here and having the organization put so much trust in me has been great."

WOMEN'S WORLD CUP

Hegerberg looking to sate long career

By STEVE DOUGLAS
Associated Press

She has often been described as the Lionel Messi of women's soccer because of her scoring feats.

Now Ada Hegerberg is looking to accomplish what the Argentinian great finally achieved a few months ago and win a World Cup to sate a largely unfulfilled international career.

A total of three goals across three major international tournaments for Norway doesn't do justice to one of the greatest scorers in the history of the women's game. Hegerberg, after all, has netted more goals in the Champions League — the highest stage in women's soccer at club level — than any player, with 59. She became the record holder at the age of 24.

With Lyon, she's a six-time Champions League winner, an eight-time French league winner and a six-time French Cup winner. She has a scoring average of more than a goal per game for Lyon, European soccer's most decorated team.

Oh, and of course, she was the first female winner of the Ballon d'Or in 2018 at an award ceremony in Paris marred by a French DJ asking Hegerberg to twerk.

Yet when it comes to hardware through feats for her national team, Hegerberg's cupboard is bare.

The closest she came to a trophy for Norway was at her first-ever senior international tournament — the European Championship in 2013 — when her team lost in the final to Germany.

Since then, it's been a fairly sorry tale for a player who for many has transcended her national team. She has never competed at the Olympics, her only World Cup was in 2015 when Norway exited in the round of 16 and there was a group-stage elimination at the European Championship last year.

Hegerberg would have played in more major tournaments had she not decided to rule herself out of se-

lection for her national team for five years because of what she perceived to be a general disregard for women's soccer in Norway at the time. The crux of her frustration was the uneven pace of progress and strategy in the women's game. She was absent until 2022, when she opted to return ahead of that year's European Championship — coinciding with the arrival of Lise Klaveness, her former Stabæk teammate, as president of the Norwegian soccer federation.

"I was able to have very honest discussions with the federation, firstly through Lise," she said. "I am very glad to be able to come back with the team and get a new story started."

A year later, Hegerberg is still attempting to make up for lost time in a Norway uniform — and after a frustrating domestic season, too.

Hegerberg, who spent 21 months out in 2020-21 because of an anterior cruciate ligament injury, was missing for another seven months this season because of an unspecified injury that was not widely reported.

Naturally, she scored a minute after coming off the bench in her comeback game, for Lyon at Montpellier, and ended the season with six goals in nine games in all competitions.

Scoring is never a problem for this most natural of finishers—even at the international level, she has 43 goals in 76 games since making her senior debut for Norway in 2011 at the age of 16.

And neither is making a stand for what she believes in. Only a few months ago, Hegerberg appeared in a video by human rights organization Amnesty, demanding compensation for the families of migrant workers who died while working at the men's World Cup in Qatar.

"An extremely large responsibility is placed on footballers and it is tough, but that is the reality," she said in the video. "I know I have a position to show my opinion on it."

ALESSANDRA TARANTINO/AP

Norway's Ada Hegerberg controls the ball during the Women's Euro 2022 Group A match against England at Brighton & Hove Community Stadium in Brighton, England, last July.

ALVARO BARRIENTOS/AP

Lyon team captain Wendie Renard celebrates after winning the Women's Champions League final match against Wolfsburg at the Anoeta stadium in San Sebastian, Spain, on Aug. 30, 2020.

Renard determined to lead France to 1st major trophy

By JEROME PUGMIRE
Associated Press

CLAIREFONTAINE, France — Wendie Renard grew up in a place so remote that locals nicknamed it "The End of the World."

By the end of the Women's World Cup, the France captain hopes she'll be raising aloft the major international trophy that has eluded the women's national team.

The imposing central defender's journey starts with a 10,540-mile trek to Australia, where France opens its campaign in Sydney on July 23 against Jamaica.

France's men have won two World Cups and two European Championships — and reached three other major finals — but Les Bleues are underachievers. The women's team lost its only World Cup semifinal 12 years ago to the United States.

"We have a lot of quality, but our honors list is blank," Renard told The Associated Press in an interview at the team's Clairefontaine training camp outside Paris. "There's a long, long way to go. But the tougher it is, the better it is at the end."

Despite boasting a team packed with players from ultra-successful French club side Lyon — the starting lineup for France's opener at the 2019 World Cup had seven Lyon players — France has also only reached one European Championship semifinal, losing last year to Germany.

"Quite a lot of us have experience at the highest level and we need to use it," Renard said. "The

hardest thing is saying, 'I should have done this, I should have done that.' By then it's already too late."

The tournament, co-hosted by New Zealand, kicks off on July 20, which is also when Renard turns 33.

She has played 144 internationals and scored 34 goals for France. With Lyon, Renard has won a record 16 league titles and a record eight Champions League trophies.

She's long been considered one of the best players in women's soccer, yet there's a giant gap in Renard's international résumé.

Renard has a chance to put that right, which back in February didn't look like being the case.

Renard said she wouldn't play at the World Cup after saying she no longer felt able to play for France. That decision came after years of tensions between then-coach Corinne Diacre and senior players, including Renard.

Striker Marie-Antoinette Kattou and forward Kadidiatou Diani also put their international careers on hold until significant changes were made.

Two weeks later, Diacre was fired and Hervé Renard was hired. He won the African Cup of Nations as coach of Zambia and Ivory Coast, and guided Saudi Arabia to an upset win over Argentina at the men's World Cup last year.

He immediately eased tensions. Renard overturned her decision and 33-year-old midfielder Amandine Henry — who had not played for France for three years under Diacre — was recalled.

"He has an open-mindedness

and he doesn't judge you. There's a level of trust. He says things up front, which is very important. It's honest and to your face," Renard said about her new coach. "He said from the first day that his door is always open, that he wants our feedback: what we thought about the training session, if there's anything we could have done more of. He says that we have a project in common."

Renard, therefore, is among the designated leaders that other players can always approach. The others are striker Eugénie Le Sommer, Henry, Diani and midfielder Grace Geyoro.

When she put her international career on hold, Renard mentioned the need to protect her mental health, which is a priority subject under the new regime.

"The coach spoke about it with us. You have to help each teammate, you can't leave anyone on the side," Renard said. "If she's coming into the dressing room in the morning, I know if she's feeling well or not, if anything's weighing on her mind."

Renard hopes a strong World Cup performance will boost the women's league back home. Interest waned after France hosted the 2019 edition.

"There was great exposure, there was a huge media impact. But we didn't manage to surf that wave and we stagnated, or even regressed, whereas other nations made the most of it and structured their leagues," she said. "We hope we can get the momentum back, all that we lost."

Dual role

Now a mom, Morgan riding Wave into fourth World Cup

By **BERNIE WILSON**
Associated Press

SAN DIEGO — Her night's work on the pitch finished, Alex Morgan walks into the post-match news conference in her San Diego Wave uniform, barefoot and with her left ankle still taped up, with 3-year-old daughter Charlie in tow.

Morgan veers from soccer superstar to mom and back to soccer superstar.

"Why is my tummy hurting?" Charlie interjects while Morgan is discussing the Women's World Cup that begins this month in New Zealand and Australia. "I don't know. Too many snacks," her mother responds, pushing something out of her daughter's reach, segueing between topics with the ease of taking a pass and putting the ball into the back of the net.

Motherhood will bring a new element for Morgan's fourth World Cup appearance. The American star, who is married to MLS player and San Diego-area native Servando Carrasco, gave birth to Charlie on May 7, 2020, 10 months to the day after she and the United States won their second straight World Cup.

"I feel a little more calm going into my fourth one," Morgan said,

explaining that she knows what it takes to make it all the way to the final match, to take care of the little things and "just enjoy each moment."

"This is my first World Cup as a mom, so I just want to also just represent mom athletes and the accomplishments and strides we've been able to make in women's soccer. I think it is amazing.

I'm really excited for this," she said.

"There's going to be three moms on the roster, which is great."

Alex Morgan
